1 User Information

1.1 About this Document

This document provides information about products from Kontron Europe GmbH and/or its subsidiaries. No warranty of suitability, purpose, or fitness is implied. While every attempt has been made to ensure that the information in this document is accurate, the information contained within is supplied “as-is” and is subject to change without notice.

For the circuits, descriptions and tables indicated, Kontron assumes no responsibility as far as patents or other rights of third parties are concerned.

1.2 Copyright Notice

Copyright © 2003-2013 Kontron Europe GmbH

All rights reserved. No part of this document may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means (electronic, mechanical, photocopying, recording, or otherwise), without the express written permission of Kontron Europe GmbH.

1.3 Trademarks

MICROSPACE[®], smartModule[®] and smartCore[®] are trademarks or registered trademarks of Kontron Europe GmbH. Kontron is a trademark or registered trademark of Kontron AG.

The following lists the trademarks of components used in this product.

- » IBM, XT, AT, PS/2 and Personal System/2 are trademarks of International Business Machines Corp.
- » Microsoft is a registered trademark of Microsoft Corp.
- » Intel is a registered trademark of Intel Corp.

All other products and trademarks mentioned in this manual are trademarks of their respective owners. For the circuits, descriptions and tables indicated, Kontron assumes no responsibility as far as patents or other rights of third parties are concerned.

1.4 Standards

Kontron Europe GmbH is certified to ISO 9000 standards.

1.5 Warranty

For this Kontron Europe GmbH product warranty for defects in material and workmanship exists as long as the warranty period, beginning with the date of shipment, lasts. During the warranty period, Kontron Europe GmbH will decide on its discretion if defective products are to be repaired or replaced.

Within the warranty period, the repair of products is free of charge as long as warranty conditions are observed.

Warranty does not apply for defects arising/resulting from improper or inadequate maintenance or handling by the buyer, unauthorized modification or misuse, as well as the operation outside of the product's environmental specifications and improper installation and maintenance.

Kontron Europe GmbH will not be responsible for any defects or damages to other products not supplied by Kontron Europe GmbH that are caused by a faulty Kontron Europe GmbH product.

1.6 Technical Support

Technicians and engineers from Kontron Europe GmbH and/or its subsidiaries are available for technical support. We are committed to make our product easy to use and will help you use our products in your systems.

Please consult our Website at <http://www.kontron.com/support> for the latest product documentation, utilities, drivers and support contacts. Consult our customer section <http://emdcustomersection.kontron.com> for the latest BIOS downloads, Product Change Notifications, Board Support Packages, DemoImages, 3D drawings and additional tools and software. In any case you can always contact your board supplier for technical support.

2 Specification

2.1 Available Products

Part No.	Article	Intel® CPU	Remarks
802360	MSM-LP-D425	D425	PC/104 SBC with single-core Intel D425 processor
802350	MSM-LP-D525	D525	PC/104 SBC with dual-core Intel D525 processor
802361	MSM-LP-D425-sys	D425	PC/104 System with single-core Intel D425 processor
802351	MSM-LP-D525-sys	D525	PC/104 System with dual-core Intel D525 processor

2.2 Available Options

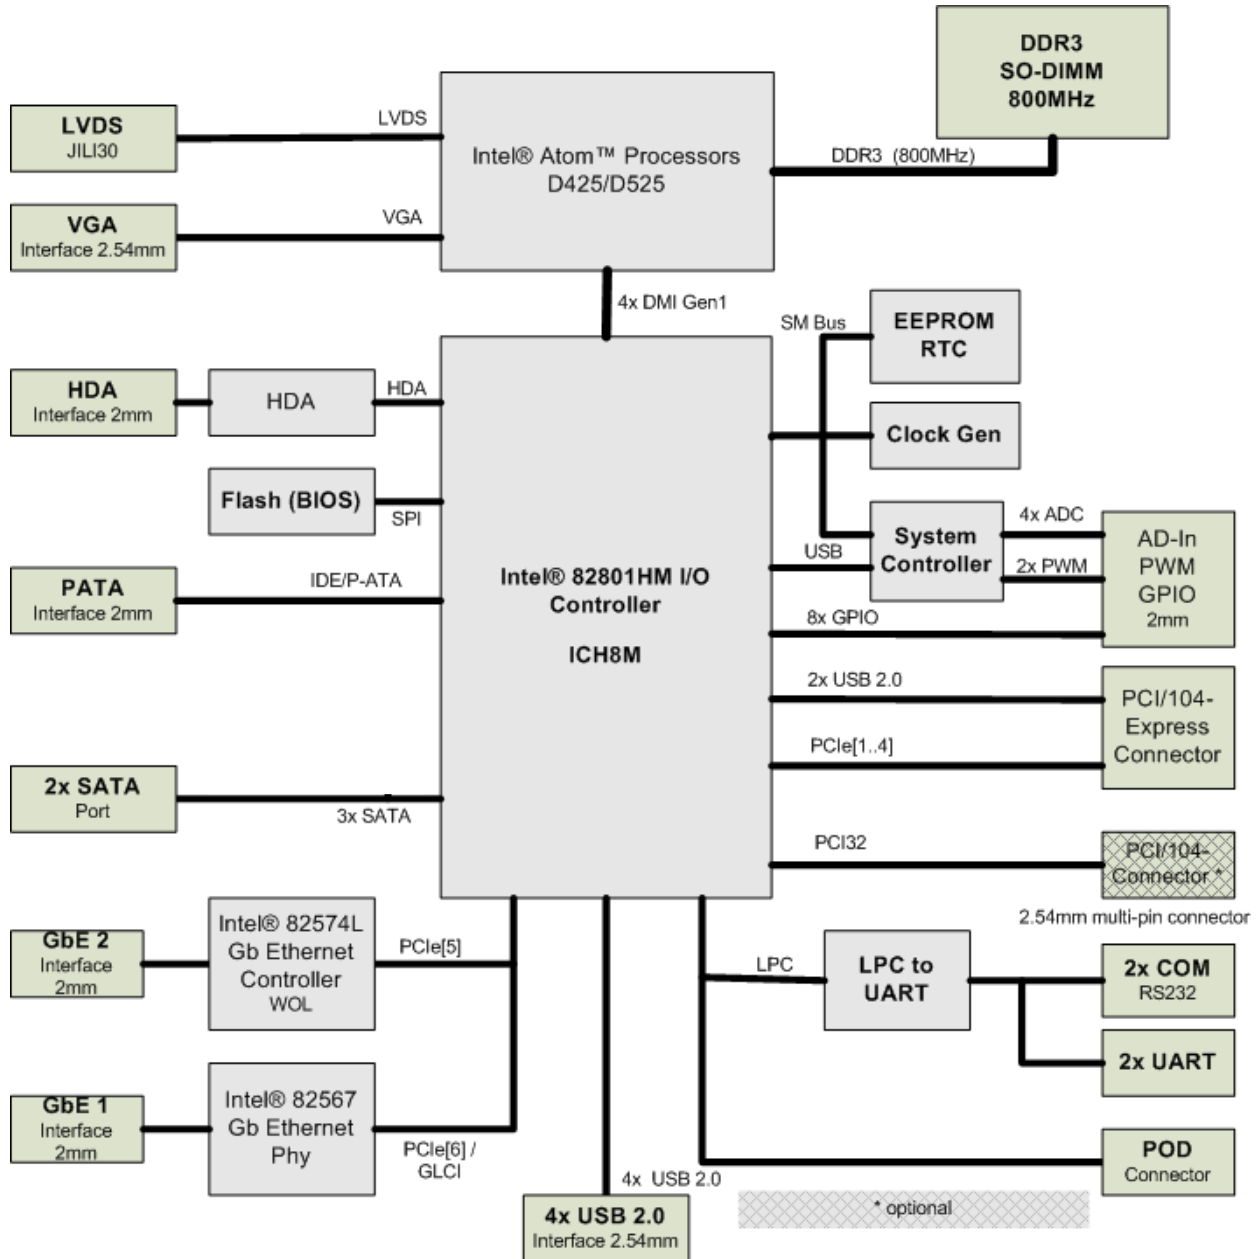

Part No.	Article	Remarks
802365	RAM 1GB DDR3 SODIMM	
802366	RAM 2GB DDR3 SODIMM	
802367	RAM 4GB DDR3 SODIMM	
802313	PCI104 Connector	
802358	MSM-LP Heat Spreader Kit	Heat spreader, screw set included.
802314	MSM-PC104 Passive Cooler Kit	Passive cooler including assembly material.
802316	MSM-PC104 Active Cooler Kit	Heat sink and fan including assembly material.
802040	MSM-PC104 CK	Cablekit including: Interfaces: DVI, Line-In/out or Mic-In, S/PDIF, 1Gb Ethernet Cables: USB, VGA, COM single, SATA, LAN, audio, IDE Warning: Do not use with system boards The pin out is mirrored due to assembling of connectors on the bottom side!

2.3 Evaluation Kit

This kit is used for the evaluation of the MSM-LP product family and is ready-to-use.

Part No.	Article	Remarks
802359	MSM-LP-Evalkit	Ready to Run package including: MSM-LP-D525, MSM-LP Heat Spreader Kit, MSM-PC104 Active Cooler, MSM-PC104 CK, PCI-104 Connector, 2GB SODIMM DDR3, Power supply 250GB 2.5" SATA hard disk with: Dual boot system Win XPe (Evaluation Version), Linux Fedora Board Support Package Test GUI for Win XPe, Linux Documentation

2.4 Block Diagram

2.5 Functional Specification

Processor

- » CPU: Intel® D425 / D525
- » Speed: 1.8GHz

Video

- » Controller: Integrated graphics controller (CPU) multi-display support
- » Memory: Up to 256MB (UMA)
- » Drivers: Intel GMA® driver

Display Interfaces

- » CRT Interface: Up to 2048 x 1536 @ 60Hz
- » LCD Interface: Up to 1366 x 768, 18bpp

Interfaces

- » 2x SATA
- » PATA
- » 2x Gbit LAN
- » 4x USB 2.0
- » 4x COM
- » GPIO/ADC/PWM
- » Audio
- » PCI optional
- » PCIexpress

Power Management

- » S-States: S0, S3, S4, S5, S5eco

2.6 Mechanical Specifications

- » 90.0mm x 102.0mm
- » Height approx. 15.5mm

2.7 Electrical Specifications

2.7.1 Supply Voltage

- » 5VDC \pm 5%

2.7.2 Supply Current (Windows XP SP3)

The tested boards were mounted on a carrier board; a mouse and a keyboard were connected. The power-consumption tests were executed under Windows XP SP3 by using a tool to stress the CPU (INTEL[®] Thermal Analysis Tool at 100 % load). The power measurement values were acquired after 15 minutes at full load and a stable CPU die temperature. To ensure a stable die temperature, a corresponding heat sink was used to hold the temperature under the critical trip point.

MSM-LP-D425/D525

Mode	[A] 5V	[W]
Full load	2.8	14
average values		

2.8 MSM-LP Environmental Specifications

Temperature

Operating with Kontron Compact Computers AG cooling solution:

- » Standard operating temperature: 0 to +70°C
- » Extended operating temperature: -40 to +85°C
- » Storage temperature: -40 to +85°C

Note: In any case, the maximum operating temperature should never be exceeded!

Humidity

- » Operating: 5% to 90% (non-condensing)

2.9 External Real-Time Clock Battery

- » Nominal voltage: 3.6V
- » Capacity: 1100mAh

Lithium Battery Precautions:

<p style="text-align: center;">CAUTION!</p> <p>Danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.</p>	<p style="text-align: center;">VORSICHT!</p> <p>Explosionsgefahr bei unsachgemäßem Austausch der Batterie. Ersatz nur durch denselben oder einem vom Hersteller empfohlenen gleichwertigen Typ. Entsorgung gebrauchter Batterien nach Angaben des Herstellers.</p>
<p style="text-align: center;">ATTENTION!</p> <p>Risque d'explosion avec l'échange inadéquat de la batterie. Remplacement seulement par le même ou un type équivalent recommandé par le producteur. L'évacuation des batteries usagées conformément à des indications du fabricant.</p>	<p style="text-align: center;">PRECAUCION!</p> <p>Peligro de explosión si la batería se sustituye incorrectamente. Sustituya solamente por el mismo o tipo equivalente recomendado por el fabricante. Disponga las baterías usadas según las instrucciones del fabricante.</p>
<p style="text-align: center;">ADVARSEL!</p> <p>Lithiumbatteri – Eksplosjonsfare ved feilagtig håndtering. Udsiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.</p>	<p style="text-align: center;">ADVARSEL!</p> <p>Eksplosjonsfare ved feilaktig skifte av batteri. Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten. Brukte batterier kasseres i henhold til fabrikantens instruksjoner.</p>
<p style="text-align: center;">VARNING!</p> <p>Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.</p>	<p style="text-align: center;">VAROITUS!</p> <p>Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan lalteil- mistajan suositteluun tyypin. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.</p>

3 MSM-LP Connectors & Jumpers

3.1 Top

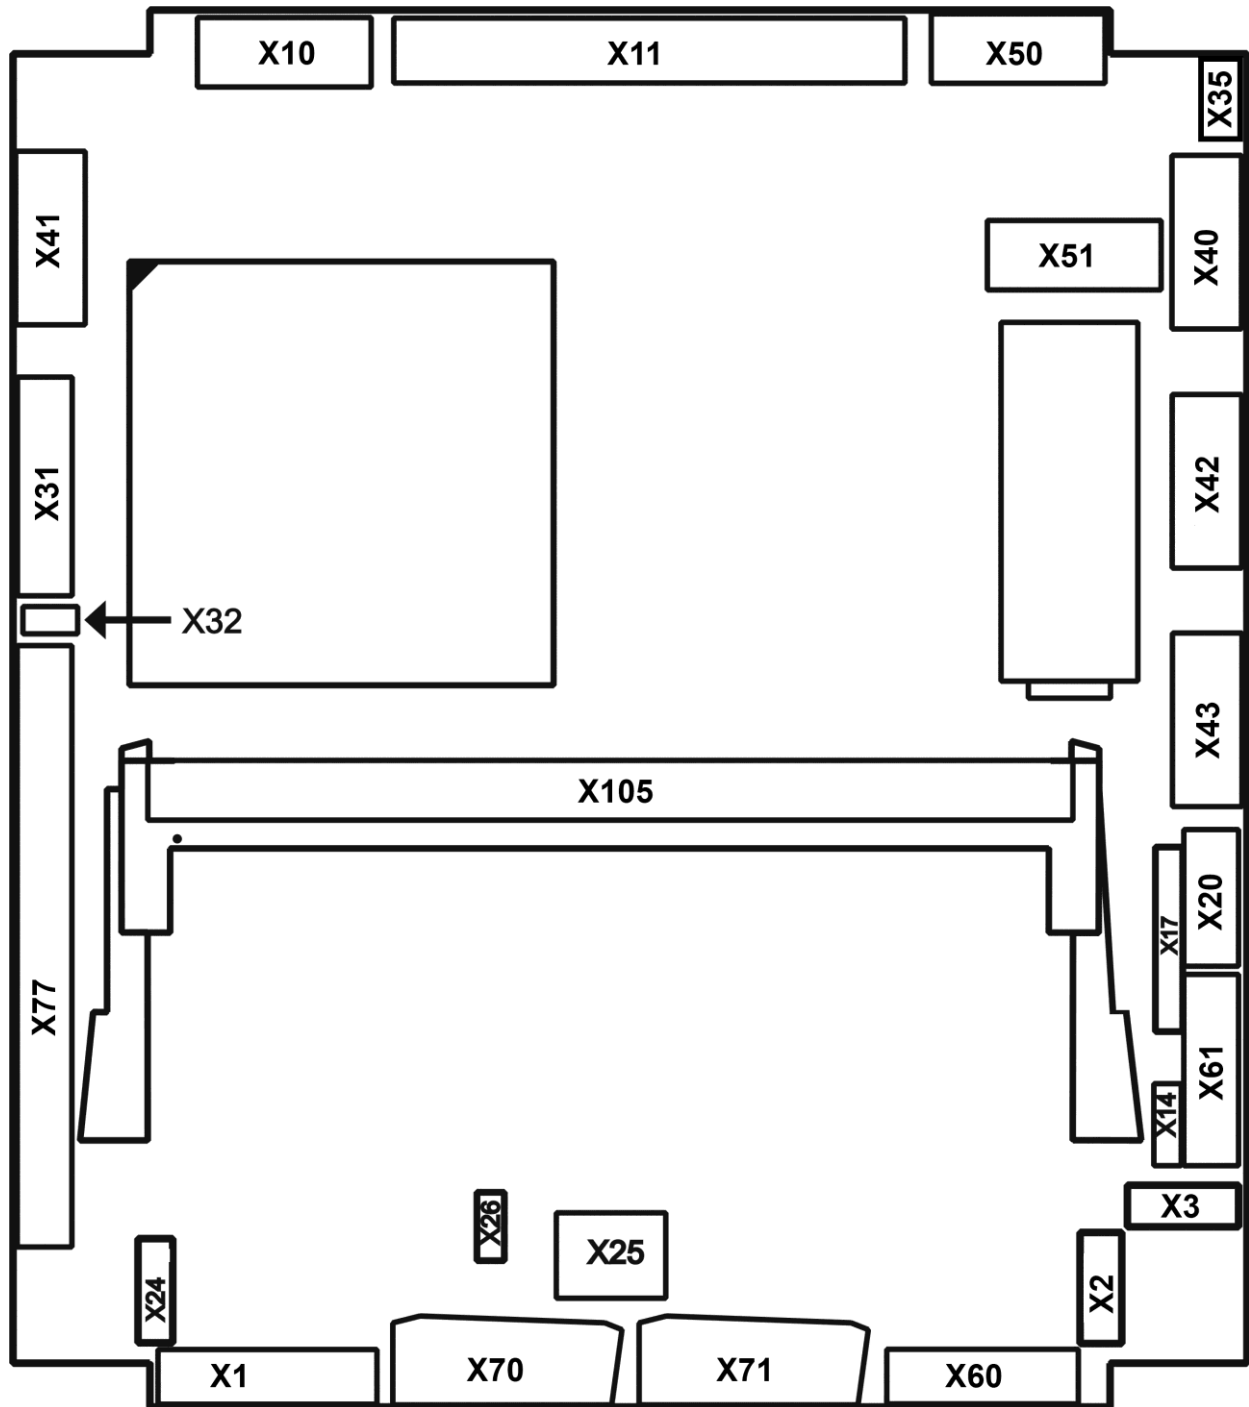

Photo of an MSM-LP board with optional PCI-104 (X101) connector assembled on the bottom (pins visible through the board).

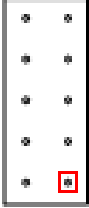

3.2 Connector Descriptions – Top

Warning: On system boards the pin out is mirrored due to assembling of connectors on bottom side! The description is applicable on view from top, if system pin headers are viewed from bottom; even and odd pin numbers must be swapped 1<->2, 3<->4, 5<->6, 7<->8, 9<->10, 11<->12, 13<->14, 15<->16.

3.2.1 CRT Interface – X50

The board provides an onboard analogue CRT interface.

Header	Pin	Signal Name	Function
2.54mm grid 	1	GND	Ground
	2	RED	Red video signal
	3	NC	Not connected
	4	GREEN	Green video signal
	5	NC	Not connected
	6	BLUE	Blue video signal
	7	CRT_DDATA	DDC data
	8	CRT_HSYNC	Horizontal sync
	9	CRT_VSYNC	Vertical sync
	10	CRT_DCLK	DDC clock

3.2.2 SATA Interface – X70/X71

The board layout supports two SATA 300 interfaces. It is not intended that the standard SATA connectors are assembled from the bottom side. Any connections to a baseboard or to a system I/O must be done with standard cables.

Header	Pin	Signal Name	SATA Connector Pin	Function
1.27mm grid 	1	GND		Ground
	2	GND	1	Ground
	3	SATA _x _TXP	2	Data transmit positive
	4	NC		NC
	5	SATA _x _TXN	3	Data transmit negative
	6	NC		NC
	7	GND		Ground
	8	GND	4	Ground
	9	SATA _x _RXN	5	Data receive negative
	10	NC		NC
	11	SATA _x _RXP	6	Data receive positive
	12	NC		NC
	13	GND		Ground
	14	GND	7	Ground

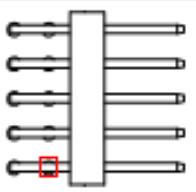

x is the number of the SATA port (SATA1: x -> 1)

3.2.3 Serial Port Interfaces – X40/X41/X42/X43

Four serial ports for asynchronous serial communication are defined. X40, X41 support RS-232 level and X42, X43 support TTL level. An external conversion to RS-232 and RS-422/485 is possible for all ports.

Note: External converters to RS-232 or RS-422/485 with galvanic separation are available. All four ports can bypass the level-shifters to support TTL levels (OEM high volume placement option).

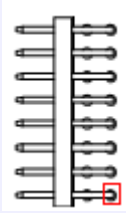

On system board all four serial ports support TTL level!

Header	Pin	Signal Name	Function	DSUB9
2.54mm grid 	1	DCDXx#	Data carrier detect	1
	2	DSRXx#	Data set ready	6
	3	RXDXx#	Receive data	2
	4	RTSXx#	Request to send	7
	5	TXDXx#	Transmit data	3
	6	CTSx#	Clear to send	8
	7	DTRXx#	Data terminal ready	4
	8	RIXx#	Ring indicator	9
	9	GND	Ground	5
	10	V5.0_S0	Power +5V	-

x is the number of the COM port (COM1: x -> 1)

3.2.4 GPIO and AD/DA Interface – X31

The board has a GPIO header interface with additional AD/DA channels. Any filtering must be done externally.

Header	Pin	Signal Name	Function
2.00mm grid 	1	GPIO0	General purpose I/O
	2	GPIO1	General purpose I/O
	3	GPIO2	General purpose I/O
	4	GPIO3	General purpose I/O
	5	GPIO4	General purpose I/O
	6	GPIO5	General purpose I/O
	7	GPIO6	General purpose I/O
	8	GPIO7	General purpose I/O
	9	PWM_OUT0	D/A output
	10	PWM_OUT1	D/A output
	11	ADC_IN0	A/D input (0-10.3V) *)
	12	ADC_IN1	A/D input (0-10.3V) *)
	13	ADC_IN2	A/D input (0-10.3V) *)
	14	ADC_IN3	A/D input (0-10.3V) *)
	15	GND	Ground
	16	+V3.3_S5	Power +3.3V

*) A/D input (0-4.88V) on system board

3.2.5 Power Supply – X1

A power connector for the main power supply is provided. The SBCs function with a single +5V power supply. Additional voltages for PC/104 peripherals (+12V, -5V, -12V) must be generated externally.

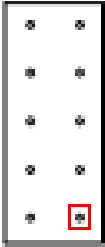

Header	Pin	Signal Name	Function
2.00mm grid 	1	+12V_IN	Power +12V
	2*)	PSON#	ATX power on (Power LED)
	3	+5V_IN	Power +5V
	4	+5V_IN	Power +5V
	5	GND	Ground
	6	GND	Ground
	7	GND	Ground
	8	GND	Ground
	9	POWER_BTN#	External main button
	10	RESET_BTN#	External reset button
	11*)	IGNITION#	Ignition input
	12	HDD_ACT#	HDD activity LED
	13	VBAT	RTC battery input
	14	SMB_ALERT#	System management alert
	15	SMB_DAT	System management bus data
	16	SMB_CLK	System management bus clock

*) Warning: On system board the pin out changes!

Pin 2 PSON# is the SLP_S5# 3.3 Volt output and Pin 11 EC_IGNITION# is the SLP_S3# 3.3 Volt output.

3.2.6 USB Interfaces – X50/X51

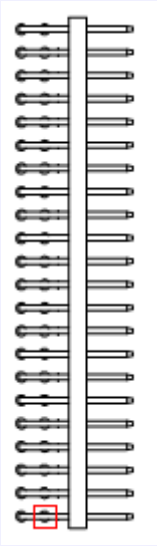

The board is populated with four USB interfaces. Two connectors with 2 USB ports each are defined. Further USB ports are accessible over the PCIe/104 extension connector.

Header	Pin	Signal Name	Function
2.54mm grid 	1	USBxVCC	Power +5V
	2	USByVCC	Power +5V
	3	USBxN	USBx data negative
	4	USByN	USBy data negative
	5	USBxP	USBx data positive
	6	USByP	USBy data positive
	7	GND	Ground
	8	GND	Ground
	9	SHD	Shield
	10	SHD	Shield

x (y) is the number of the USB port (USB1: x -> 1)

3.2.7 IDE Interface (P-ATA) – X77

The design supports one IDE interface that can drive up to two hard disks. When two devices share a single adapter, they must be connected in a master-slave, daisy-chain configuration.

Header	Pin	Signal Name	Function	Pin	Signal Name	Function
2.54mm grid 	1	IDE_RST#	Reset	2	GND	Ground
	3	IDE_D7	Data 7	4	IDE_D8	Data
	5	IDE_D6	Data 6	6	IDE_D9	Data
	7	IDE_D5	Data 5	8	IDE_D10	Data
	9	IDE_D4	Data 4	10	IDE_D11	Data
	11	IDE_D3	Data 3	12	IDE_D12	Data
	13	IDE_D2	Data 2	14	IDE_D13	Data
	15	IDE_D1	Data 1	16	IDE_D14	Data
	17	IDE_D0	Data 0	18	IDE_D15	Data
	19	GND	Ground	20	Key (NC)	Key pin
	21	IDE_DRQ	DMA request	22	GND	Ground
	23	IDE_IOW#	I/O write	24	GND	Ground
	25	IDE_IOR#	I/O read	26	GND	Ground
	27	IDE_IOCHRDY	I/O channel ready	28	IDE_CSEL	Cable select
	29	IDE_DACK#	DMA acknowledge	30	GND	Ground
	31	IDE_IRQ	Interrupt request	32	NC	Not connected
	33	IDE_SA1	Address 1	34	IDE_ATAD	UDMA detection
	35	IDE_SA0	Address 0	36	IDE_SA2	Address 2
	37	IDE_CS1#	Chip select 1	38	IDE_CS3#	Chip select 3
	39	NC	Not connected	40	GND	Ground
	41	VCC	Power +5V	42	VCC	Power +5V
	43	GND	Ground	44	NC	Not connected

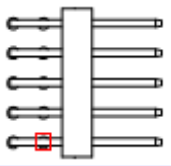

X77 not equipped on system board.

3.2.8 Fan Connector – X24

Header	Pin	Signal Name	Function
2.00mm 	1	Speed frequency signal	
	2	+5V	Power +5V
	3	GND	Ground

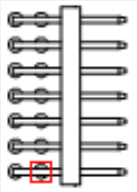

3.2.9 Audio Interface – X20

The audio interface provides stereo analogue and digital audio signals.

Header	Pin	Signal Name	Function
2.00mm grid 	1	LINE_R	Line right
	2	GND_A	Analogue ground
	3	LINE_L	Line left
	4	MIC_R	Mic right
	5	GND_A	Analogue ground
	6	MIC_L	Mic left
	7	V5	Power +5V
	8	SPDIF_IN	Digital audio input
	9	GND	Ground
	10	SPDIF_OUT	Digital audio output

3.2.10 LAN Interface – X60/X61

Two Gbit Ethernet ports are defined. Suitable transformers must be provided externally.

Header	Pin	Signal Name	Function
2.00mm grid 	1	GbEx_MDI0N	Bidirectional pair 0 negative
	2	GbEx_MDI0P	Bidirectional pair 0 positive
	3	GbEx_MDI1N	Bidirectional pair 1 negative
	4	GbEx_MDI1P	Bidirectional pair 1 positive
	5	GbEx_LED0	LED Link
	6	V1.8	Center voltage
	7	GND	Ground
	8	V3.3	Power +3.3V
	9	GbEx_LED1	LED activity
	10	GbEx_LED2	LED link 100
	11	GbEx_MDI2N	Bidirectional pair 2 negative
	12	GbEx_MDI2P	Bidirectional pair 2 positive
	13	GbEx_MDI3N	Bidirectional pair 3 negative
	14	GbEx_MDI3P	Bidirectional pair 3 positive

x is the number of the GbE port (GbE1: x -> 1)

3.2.11 AMP Power Input – X2/X3

The AMP power inputs are always connected on the top side of the board.

Header	Nr.	Signal Name	Function
AMP 2.8mm	X3	V5.0_IN	5 Volt power IN

Header	Nr.	Signal Name	Function
AMP 4.75mm	X2	GND	Ground

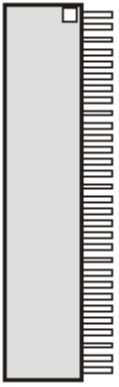

X2 and X3 not equipped on system board.

3.2.12 LVDS Interface

The LVDS implementation complies with the JILI specification of Kontron (JILI30). When using an LCD, additional voltages may be required to drive the display logic and supply the backlight converter therefore an additional connector for supply voltages is provided.

The FPC connector is only mounted on the top side. The corresponding backlight connector is assembled on the opposite side.

FPC Connector – X11

Header	Pin	Signal Name	Function	Pin	Signal Name	Function
	1	FPC_AN	First channel data out A	16	NC	Not connected
	2	FPC_AP	First channel data out A	17	GND	Ground
	3	FPC_BN	First channel data out B	18	NC	Not connected
	4	FPC_BP	First channel data out B	19	NC	Not connected
	5	FPC_CN	First channel data out C	20	NC	Not connected
	6	FPC_CP	First channel data out C	21	NC	Not connected
	7	GND	Ground	22	NC	Not connected
	8	FPC_CLKN	First channel clock	23	NC	Not connected
	9	FPC_CLKP	First channel clock	24	GND	Ground
	10	FPC_DN	First channel data out D	25	SDA	I2C data line
	11	FPC_DP	First channel data out D	26	DATAENA	Panel power output
	12	NC	Not connected	27	SCL	I2C clock line
	13	NC	Not connected	28	VCC	+3.3V power *)
	14	GND	Ground	29	VCC	+3.3V power *)
	15	NC	Not connected	30	VCC	+3.3V power *)

*) Panel power can be set to +5V by assembly option.

3.3 Bottom

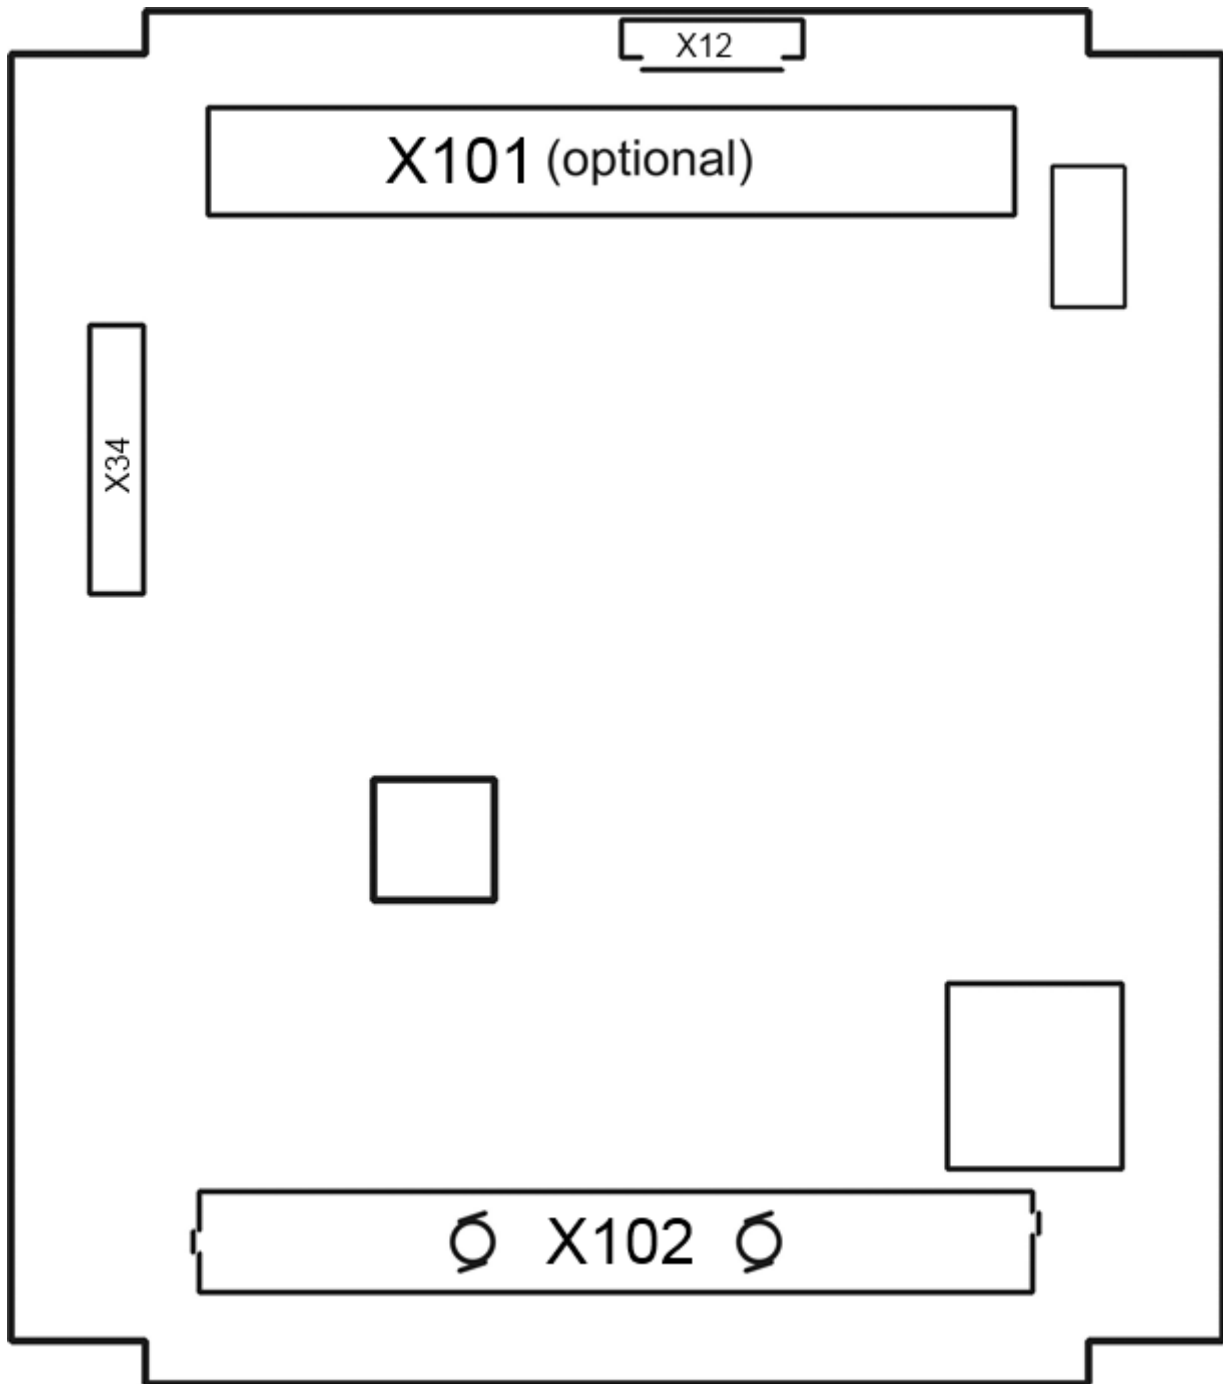

Photo of an MSM-LP board with optional PCI-104 (X101) connector assembled.

3.4 Connector Descriptions – Bottom

3.4.1 LPC/POD Interface – X34

This is a connector for additional LPC devices such as POD, SuperIO or TPM. It can also be used for a second BIOS flash interface (SPI or LPC)

Header	Pin	Signal Name	Function	Pin	Signal Name	Function
2.00mm grid 	1	V3.3_S0	Power	2	LPC_LDA0	Data
	3	LFRAME#	LPC frame	4	LPC_LDA1	Data
	5	PLT_RST#	Reset OUT	6	LPC_LDA2	Data
	7	V3.3_S0	Power	8	LPC_LDA3	Data
	9	V5.0_S0	Power	10	PLT_RST#	Reset OUT
	11	CLK	Clock	12	BIOS_EN	BIOS selection
	13	GND	Ground	14	RESET_IN#	Reset IN
	15	V3.3_SPI_PROG	Power IN	16	SERIRQ	
	17	SPI_CS#		18	SPI_CLK	
	19	SPI_MISO		20	SPI_MOSI	

3.4.2 Backlight Connector – X12

The backlight connector is always mounted on the bottom side, opposite of the LVDS FPC Connector .

Header	Pin	Signal Name	Function
	1	NC	Not connected
	2	BKLTADJ	Brightness control (PWM 3.3 V)
	3	GND	Ground
	4	NC	Backlight power +5V *)
	5	NC	Backlight power +5V *)
	6	GND	Ground
	7	BKLTON	Backlight on/off

*) Backlight power can be set to +12V by assembly option (needs +12V on pin 1 of supply connector X1).

3.5 Other Connectors

Connector	Structure	Pins	Remarks
X101	PCI-104	4x30	Bottom, 2mm (optional)
X17	JTAG G-LAN1	1x7	Top, 2mm
X105	SODIMM DDR3	204	Top, 0.6mm
X25	AVR programming	2x4	Top, 2mm
X102	PC104e	156	Bottom, 0.635mm

3.6 Jumpers

3.6.1 THT Jumpers – Top

Settings written in bold are defaults!

Assembly Defaults			Description		
Reference	Sort	Position	Signal Name	Open / Position 1-2	Closed / Position 2-3
X14 *)	3-way 2.0 mm	2-3	V3.3_82574	WOL *)	No WOL
X32	2-way 2.0 mm	Closed	Auto-start	No auto-start	Auto-start
X35	2-way 2.0 mm	open	BIOS_Default	Normal BIOS startup	Recovery BIOS settings

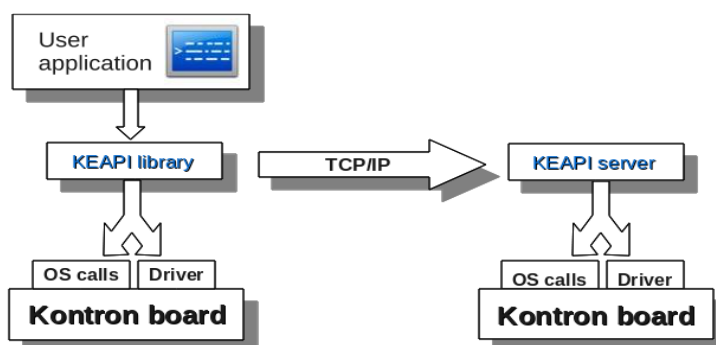

*) On system board WOL is always active, X14 is not equipped.

4 Special Features

4.1 KeAPI

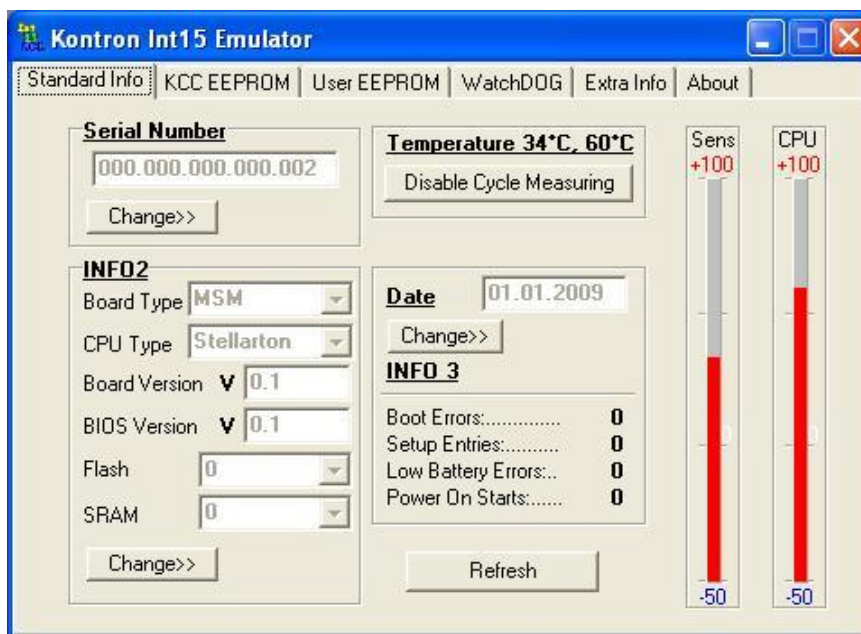

The Kontron embedded API (KeAPI) is an extension of the PICMG EAPI mainly with additional remote functionality. It consists of hardware drivers providing access to features like Watchdog, I2C Bus or GPIO and a QT based user interface KEAPI GUI. KeAPI is part of standard BSPs.

Please refer to [EMD Customer Section](#) for detailed documentation and downloads.

4.2 INT15 Support

The INT15 SFR (Special Function Register) functions support access to an I2C EEPROM. Addresses 0h-3FFh are reserved for manufacturer information and counters; addresses 400h-7FFh are for customer purposes. INT15 SFR is supported under DOS and Windows (over 32/64 bits driver).

4.3 System Controller USB Serial Commands

Note: "System Controller USB" function must be enabled in the BIOS setup for using the ADC and PWM functions.

MSM-LP on-board 4-channel ADC and 2-channel PWM are accessible over a USB-serial port interface.

- » In the Windows Device Manager it is represented as "KCC ADC/PWM Control Serial Interface". For a driver installation under Windows, the "KCCUSBserial.inf" file is required.
- » For Linux this interface does not require any drivers and is listed in the system as the "ttyACM0" serial port.
- » Communication with ADC/PWM can be organized over the standard serial asynchronous protocol.
- » Every control request consists of a 4 Byte package, with the leading (synch) Byte always 0x15.
- » The number of Bytes in the answer is variable and depends on the request.

4.3.1 I/O Control Requests/Answers:

4 Byte Command	Parameters	Description
'\x15','a','c',N {0x15,0x61,0x63,N}	N-channels mask N=0 – stop measurement N=0x01...0x0F define which channels 0...3 will be measured	Start cyclic ADC measurement when ADC measures all channels defined in the mask field, the controller sends an answer: '\x15','D',VS...VE {0x15,0x44,VS...VE} , where VS is the Byte value of the first defined channel and VE is the Byte value of the last defined channel. The measurement/answer will repeat until the controller receives a stop command ('\x15','a','c',0). The number of received Bytes defined by the channels mask. Example: mask N=0x05, ADC will measure on Channels 0 and 2 and send a 4 Byte answer '\x15','D',V0,V2, where V0 and V2 are results of the measurement on the appropriate channels.
'\x15','a','s',N {0x15,0x61,0x73,N}	N-channels mask N=0 – stop measurement N=0x01...0x0F define which channels 0...3 will be measured	Start single shot ADC measurement when ADC measures all channels defined in the mask field, the controller sends an answer: '\x15','D',NS...NE {0x15,0x44,VS...VE} where VS is the Byte value of the first defined channel and VE is the Byte value of the last defined channel. A non-cycled variant of the command above. The number of received Bytes defined by the channels mask.
'\x15','p','a','e' {0x15,0x70,0x61,0x65}		Enable PWM Channel A.
'\x15','p','a','d' {0x15,0x70,0x61,0x64}		Disable PWM Channel A.
'\x15','p','b','e' {0x15,0x70,0x62,0x65}		Enable PWM Channel B.
'\x15','p','b','d' {0x15,0x70,0x62,0x64}		Disable PWM Channel B.
'\x15','w','a',N {0x15,0x77,0x61,N}	N – PWM value	Set PWM value on Channel A (PWM must be enabled).
'\x15','w','b',N {0x15,0x77,0x62,N}	N – PWM value	Set PWM value on Channel B (PWM must be enabled).
'\x15','f','v','r' {0x15,0x66,0x76,0x72}		Get firmware version. Answer: '\x15','V','M','S','M','L','P','_','0','6',0 The answer is always 11 Bytes, '\x15','V' - answer prefix, 8 Bytes of the firmware version and a final Byte 0.

4.4 Digital I/O Ports/Operations

The MSM-LP board has 8 digital inputs/outputs accessible over system port I/O operations.

The base address for I/O operations can be obtained as a WORD value from the PCI config space.

Bus:0, Dev:0x1F, Fun:0, Offset :0x48. Default base address is 0x0480.

4.4.1 I/O Control Access

Access to digital inputs/outputs, i.e. settings of I/O direction and logical level control can be provided over Kontron embedded API functions.

4.5 Watchdog Function

The MSM-LP provides a watchdog function which resets the system when a specific amount of time has elapsed without watchdog reset activity. The watchdog is highly configurable and the timeout time can be set between two seconds and 65,535 seconds. The watchdog output is connected to the system controller.

4.5.1 BIOS Setup

With this setting, the watchdog timer of the MSM-LP can be enabled and the time until a reset is asserted can be selected. The watchdog timer is part of F81216 chip and can be reset by directly accessing the F81216.

See Section **Fehler! Verweisquelle konnte nicht gefunden werden.** on how to access the F81216 watchdog.

Set Watchdog timeout:

- » Disabled: The watchdog timer is disabled
- » 1 / 5 / 15min: The watchdog timer resets the board after this amount of time.
- » **Default value:** Disabled.

Warning: If this setting is enabled without a working watchdog reset in your program, your computer will reset after the time set in the BIOS setup.

4.5.2 Watchdog Hardware Access

The watchdog registers of the F81216 chip are accessible over I/O mapped registers with indexed access. The following table shows the addresses used. The F81216 chip has few devices and the watchdog is device number 8.

Address	Name	Type	Description
0x4E	IND	RW	Indexed register access number
0x4F	DAT	RW	Indexed register content

Indexed Register Map of Watchdog Device 08h

Index	Bit	Name	Access	Function
0x30	0	WDT_EN	RW	Watchdog device enable register: 0=disable,1=enable
0x30	1-7		RsvdP	Reserved
0xF0	0	WDT_EVENT	RO	0: no time out has occurred 1: time out has occurred Writing "1" to this bit will clear the status
0xF0	1-2	WDT_UNIT	RW	00: Timer Unit is 10ms 01: Timer Unit is 1 second 10: Timer Unit is 1 minute 11: reserved
0xF0	3-7		RsvdP	Reserved
0xF1	7-0	WDT_CNT	RW	The number of time units for the watchdog timer. Write the same non-zero value twice to enable the timer; otherwise the timer is disabled.

Register Attributes

Attribute	Description
RsvdP	RESERVED AND PRESERVED Reserved for future RW implementations. Registers are Read-only and the software must preserve the value for writes to this bit.
RW	READ-WRITE REGISTER Register bits are Read-Write and can be set or cleared by software.
RO	READ-ONLY Register bits are Read-only and can not be altered by software.
WO	WRITE-ONLY Register bits can only be Written. Reading returns indeterminable data.

Example: Enable/Retrigger Watchdog

```

; Watchdog device activation
mov dx, 4Eh      ; Store port in dx for in/out instruction
mov al, 77h     ; Configuration mode value
out dx, al      ; Output 2 times to enter config mode
out dx, al      ;
mov al, 07h     ; Device number register
out dx, al      ; Move value to IND register
inc dx          ; Increment dx to DAT register = 0x4F
mov al, 08h     ; Device number 8 - watchdog
out dx, al      ; Set DAT register
dec dx          ; Decrement dx to IND register
mov al, 30h     ; Activation register address = 0x30
out dx, al      ; Move value to IND register
inc dx          ; Increment dx to DAT register
mov al, 01h     ; Activation value WDT_EN = 1
out dx, al      ; Set DAT register – enable watchdog device
dec dx          ; Decrement dx to IND register to 0x4E address
mov al, 0F0h    ; WDT_UNIT register
out dx, al      ; Move value to IND register
inc dx          ; Increment dx to DAT register to 0x4F address
mov al, 02h     ; Set Timer Unit is 1 second, WD_UNIT = 01
out dx, al      ; Set DAT register
dec dx          ; Decrement dx to IND register to 0x4E address
mov al, 0F1h    ; WDT_CNT register
out dx, al      ; Move value to IND register
inc dx          ; Increment dx to DAT register 0x4F address
mov al, 10      ; Set Timer to 10 second interval
out dx, al      ; Set DAT register 2 times
out dx, al      ;
dec dx          ; Decrement dx to IND register to 0x4E address
mov al, 0AAh    ; Leave configuration mode
out dx, al      ; Move value to IND register

```

In C language:

```

outputb(0x4E,0x77); //output 2 times to enter configuration mode
outputb(0x4E,0x77);
outputb(0x4E,0x7); //device index
outputb(0x4F,0x8); //device number 8
outputb(0x4E,0x30); //activation register
outputb(0x4F,0x01); //activate watchdog WDT_EN = 1
outputb(0x4E,0xF0); //WDT_UNIT register
outputb(0x4F,0x02); //set timer unit is 1 second, WD_UNIT = 01
outputb(0x4E,0xF1); //WDT_CNT register
outputb(0x4F,10); // Set Timer to 10 second interval, 2 times
outputb(0x4F,10); //
outputb(0x4E,0xAA); //Leave configuration mode

```

Example: Disable Watchdog

```

; Watchdog device activation
mov dx, 4Eh      ; Store port in dx for in/out instruction
mov al, 77h     ; Configuration mode value
out dx, al      ; Output 2 times to enter config mode
out dx, al      ;
mov al, 07h     ; Device number register
out dx, al      ; Move value to IND register
inc dx         ; Increment dx to DAT register = 0x4F
mov al, 08h     ; Device number 8 - watchdog
out dx, al      ; Set DAT register
dec dx         ; Decrement dx to IND register
mov al, 0F1h    ; WDT_CNT register
out dx, al      ; Move value to IND register
inc dx         ; Increment dx to DAT register 0x4F address
mov al, 0       ; Set Timer to 10 second interval
out dx, al      ; Set DAT register 2 times to disable watchdog
out dx, al      ;
dec dx         ; Decrement dx to IND register
mov al, 30h     ; Activation register address = 0x30
out dx, al      ; Move value to IND register
inc dx         ; Increment dx to DAT register
mov al, 0h      ; Deactivation value WDT_EN = 0
out dx, al      ; Set DAT register – enable watchdog device
dec dx         ; Decrement dx to IND register to 0x4E address
mov al, 0AAh    ; Leave configuration mode
out dx, al      ; Move value to IND register

```

In C language:

```

outputb(0x4E,0x77); //output 2 times to enter configuration mode
outputb(0x4E,0x77);
outputb(0x4E,0x7); //device index
outputb(0x4F,0x8); //device number 8
outputb(0x4E,0xF1); //WDT_CNT register
outputb(0x4F,0); // Set Timer to 0, 2 times
outputb(0x4F,0); //
outputb(0x4E,0x30); //activation register
outputb(0x4F,0x00); //deactivate watchdog WDT_EN = 0
outputb(0x4E,0xAA); //Leave configuration mode

```

5 Design Considerations

5.1 Board Drill-Hole Dimensions

The MSM-LP board follows the PCIe/104™ specification. For more information see the PCI/104-Express™ & PCIe/104™ specifications.

5.2 Thermal Management

The heat spreader plate assembly is delivered by Kontron Compact Computers AG for the MSM-LP. The heat spreader plate on top of this assembly is **not** a heat sink. It works as a standard thermal interface to be used with a heat sink or other cooling device.

External cooling must be provided to maintain the heat spreader plate at proper operating temperatures. Under worst case conditions, the cooling mechanism must maintain an ambient air and heat spreader plate temperature of 85°C or less.

The aluminum blocks and thermal pads on the underside of the heat spreader assembly serve to provide thermal interfaces between the heat spreader plate and the major heat-generating components on the MSM-LP.

5.3 Heat Spreader Dimensions

Figures: heat spreader plate showing the pads for the heat-generating components of the MSM-LP boards.

6 BIOS Operation

The module is equipped with the AMI Aptio® BIOS located in an onboard SPI serial flash memory. The BIOS can be updated using a flash utility.

6.1 Determining the BIOS Version

The AMI Aptio® BIOS version can be determined on the BIOS setup screen.

6.2 Setup Guide

System behavior can be modified by changing the BIOS configuration.

Note: Selecting incorrect values may cause system boot failure. To recover, press <F3> to load setup default values.

6.2.1 Start the AMI Aptio® BIOS Setup Utility

To start the AMI Aptio® BIOS setup utility, press during boot-up.

Press to enter setup.

The Main Menu then appears.

The Setup Screen is composed of several sections:

Setup Screen	Location	Function
Menu Bar	Top	Lists and selects all top level menus.
Legend Bar	Bottom right	Lists Setup navigation keys.
Item-Specific Help Window	Top right	Help for the selected item.
Menu Window	Center left	Selection fields for the current menu.

Temporary Boot Menu

By pressing the <F7> key at the beginning of the startup process the temporary boot menu will appear.

```

Please select boot device:
03:00-0 Hitachi HTS541680J9S
Built-in EFI Shell
IBA GE Slot 0600 v1324
03:00-1 TSSCorp CDDVDW SH-S
TEAC FD-05PUB 1026
Enter Setup

↑ and ↓ to move selection
ENTER to select boot device
ESC to boot using defaults

```

Menu Bar

The menu bar at the top of the window lists the different menus. Use the left/right arrow keys to make a selection.

Legend for Menu Bar

Key	Function
→ or ← Arrow key	Select Screen
↑ or ↓ Arrow key	Select Item
Enter	Select
+/-	Change Option
<F1>	General Help
<F2>	Previous Values
<F3>	Optimized Defaults
<F4>	Save and Exit
<F7>	Temporary Boot Menu
<ESC>	Exit

Selecting an Item

Use the ↑ or ↓ key to move. Use the + and – keys to select a value.

Displaying Submenus

Use the ↑ or ↓ key to move the cursor to the submenu then press <Enter>. The pointer (▶) marks all the submenus.

Item-Specific Help Window

The Help window on the right side of each menu displays the Help text for the selected item.

General Help Window

Pressing <F1> on a menu brings up the general Help. Press <Esc> to exit.

6.3 BIOS Setup

6.3.2 Advanced Menu

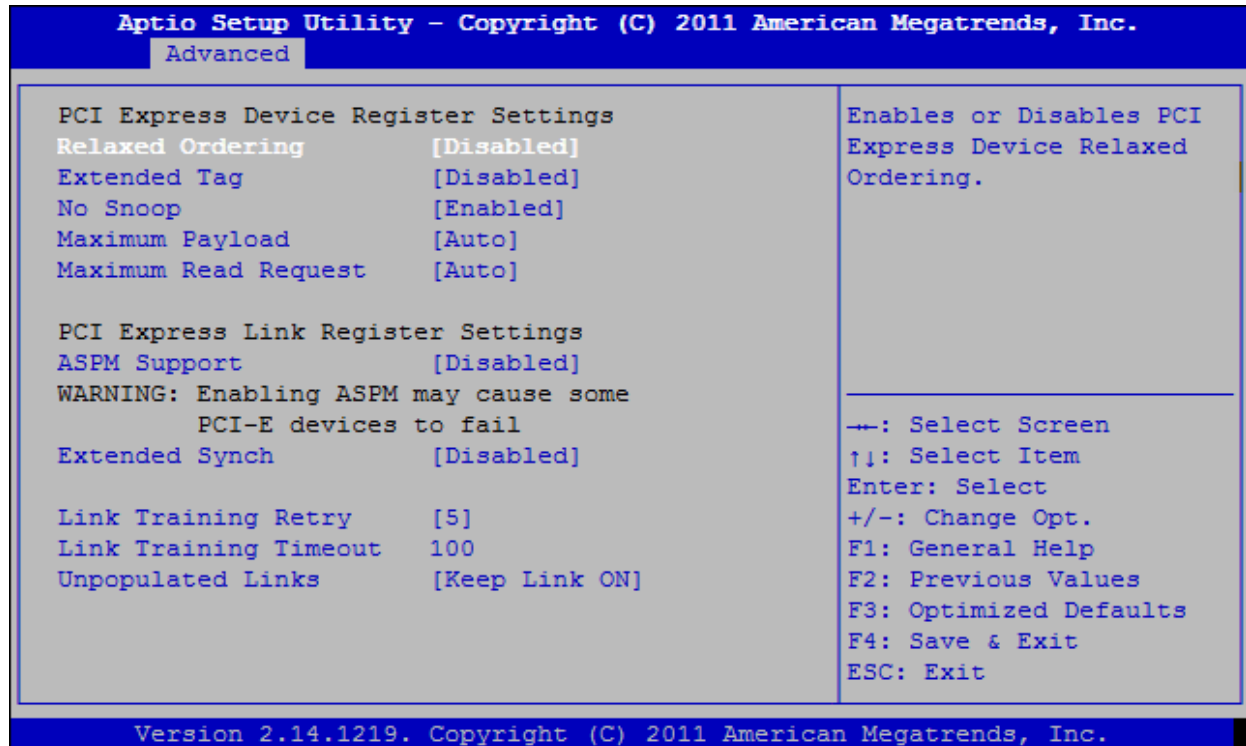

PCI Subsystem Settings Menu

Feature	Options	Description
PCI ROM Priority	Legacy ROM EFI Compatible ROM	In case of multiple Option ROMs (Legacy and EFI Compatible), specifies what PCI Option ROM to launch.
PCI Latency Timer	32 PCI Bus Clocks 64 PCI Bus Clocks 96 PCI Bus Clocks ... 248 PCI Bus Clocks	Value to be programmed into PCI Latency Timer Register.
VGA Palette Snoop	Disabled Enabled	Enables or Disables VGA Palette Register Snooping.
PERR# Generation	Disabled Enabled	Enables or Disables PCI Device to Generate PERR#.
SERR# Generation	Disabled Enabled	Enables or Disables PCI Device to Generate SERR#.

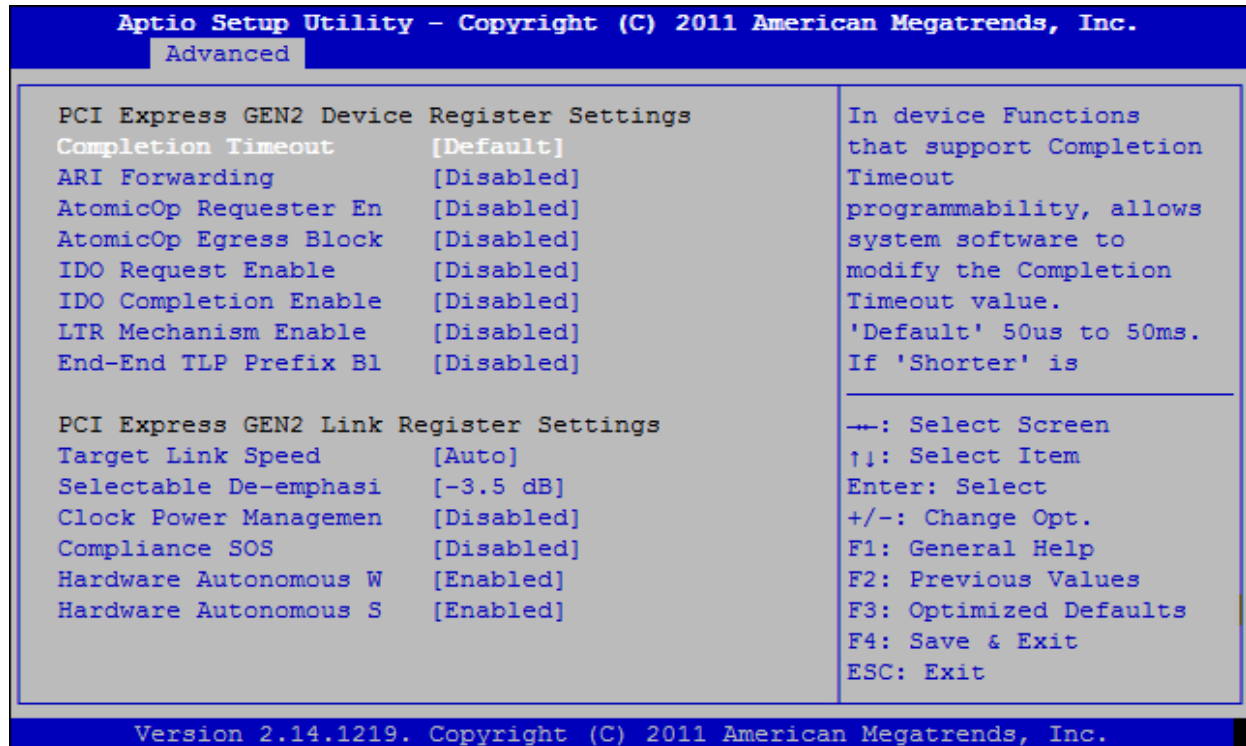

PCI Express Settings

Feature	Options	Description
Relaxed Ordering	Disabled Enabled	Enables or Disables PCI Express Device Relaxed Ordering.
Extended Tag	Disabled Enabled	If Enabled allows Device to use 8-bit Tag field as a requester.
No Snoop	Disabled Enabled	Enables or Disables PCI Express Device No Snoop Option.
Maximum Payload	Auto 128 Bytes ... 4096 Bytes	Set Maximum Payload of PCI Express Device or allow System BIOS to select the value.
Maximum Read Request	Auto 128 Bytes ... 4096 Bytes	Set Maximum Read Request Size of PCI Express Device or allow System BIOS to select the value.
ASPM Support	Disabled Auto Force L0s	Force L0s: Force all Links to L0s State Auto: BIOS Auto function Disabled: Disable ASPM
Extended Synch	Disabled Enabled	If Enabled allows generation of Extended Synchronization patterns.
Link Training Retry	Disabled 2 3	Defines number of Retry Attempts software will take to retrain the link if previous training attempt was unsuccessful.

	5	
Link Training Timeout	[1...100]	Defines number of Microseconds software will wait before polling 'Link Training' bit in Link Status register.
Unpopulated Links	Keep Link ON Disable Link	In order to save power, software will disable unpopulated PCI Express links, if this option is set to 'Disable Link'.

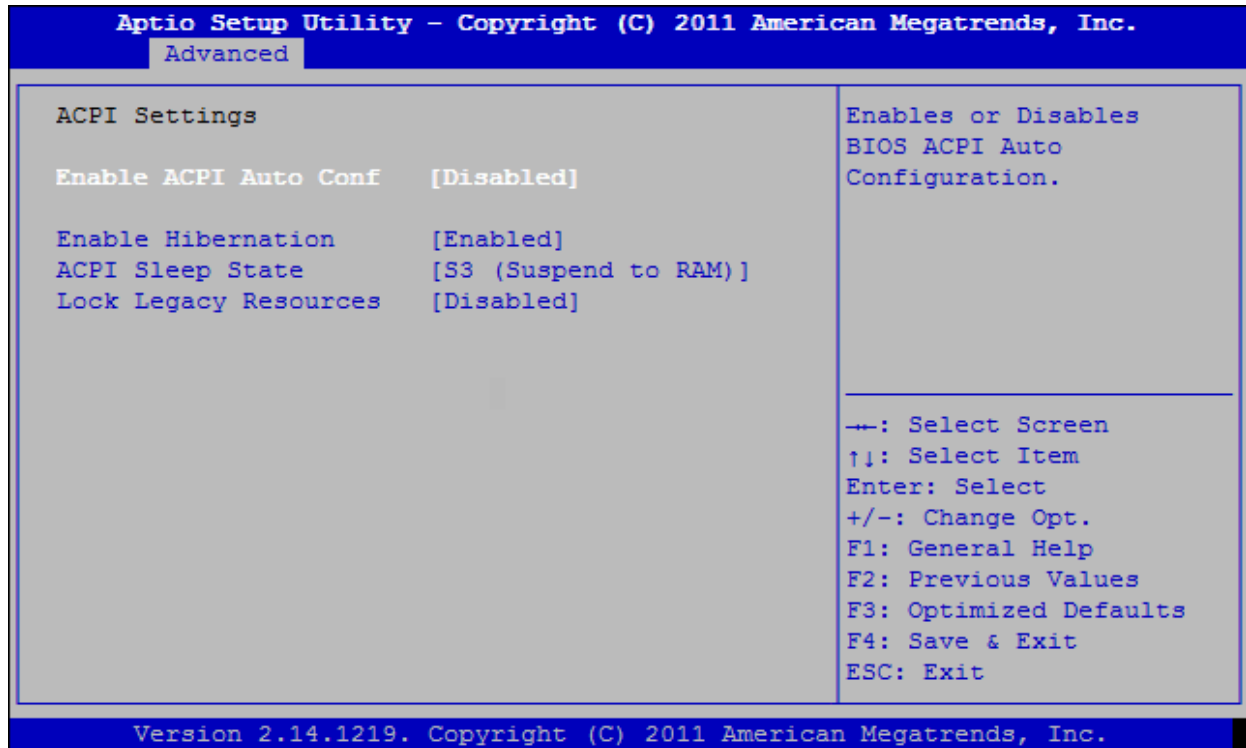

PCI Express Gen2 Settings

Feature	Options	Description
Completion Timeout	Default Shorter Longer Disabled	In device Functions that support Completion Timeout programmability, allows system software to modify the Completion Timeout value.
ARI Forwarding	Disabled Enabled	Enables or Disables ARI Forwarding.
AtomicOp Requester En	Disabled Enabled	Enables or Disables AtomicOP Requests.
AtomicOp Egress Block	Disabled Enabled	Enables or Disables AtomicOP Requests via Egress Block.
IDO Request Enable	Disabled Enabled	If set to 'Enabled', this permits setting the number of ID_Based Ordering (IDO) bit requests to be initiated.
IDO Completion Enable	Disabled Enabled	If set to 'Enabled', this permits setting the number of ID_Based Ordering (IDO) bit requests to be initiated.
LTR Mechanism Enable	Disabled Enabled	If set to 'Enabled', this enables the Latency Tolerance Reporting Mechanism.
End-End TLP Prefix B1	Disabled Enabled	If set to 'Enabled', this function will block forwarding of TLPs containing End-End TLP prefixes.
Target Link Speed	Auto Force to 2.5 GT/s	'Force to 2.5 GT/s' limits the maximum speed to GEN1 speed.
Selectable De-emphasis	-3.5 dB	If supported by hardware, this will control transmission de-

	-6.0 db	emphasis of target link when operating at 5.0 GT/s.
Clock Power Management	Disabled Enabled	If set to 'Enabled', the device is permitted to use CLKREQ# signal for power management of Link clock.
Compliance SOS	Disabled Enabled	If set to 'Enabled', this will force LTSSM to send SKP Ordered Sets between sequences when sending Compliance Pattern or Modified Compliance Pattern.
Hardware Autonomous W	Disabled Enabled	If set to 'Enabled', this will disable the hardware's ability to change link width except width size reduction for the purpose of correcting unstable link operation.
Hardware Autonomous S	Disabled Enabled	If set to 'Enabled', this will disable the hardware's ability to change link speed except speed rate reduction for the purpose of correcting unstable link operation.

ACPI Settings

Feature	Options	Description
Enable ACPI Auto Conf	Disabled Enabled	Enables or Disables BIOS ACPI Auto Configuration.
Enable Hibernation	Disabled Enabled	Enables or Disables System ability to Hibernate (OS/S4 Sleep State). This option may be not effective with some OS.
ACPI Sleep State	Suspend Disabled S1 (CPU Stop Clock) S3 (Suspend to RAM)	Select the highest ACPI sleep state the system will enter when the SUSPEND button is pressed.
Lock Legacy Resources	Disabled Enabled	Enables or Disables Lock of Legacy Resources.

Spread Spectrum clock	Off Hardware Software	>> Hardware: Spread it controlled by chip >> Software: Spread it controlled by BIOS

USB Configuration

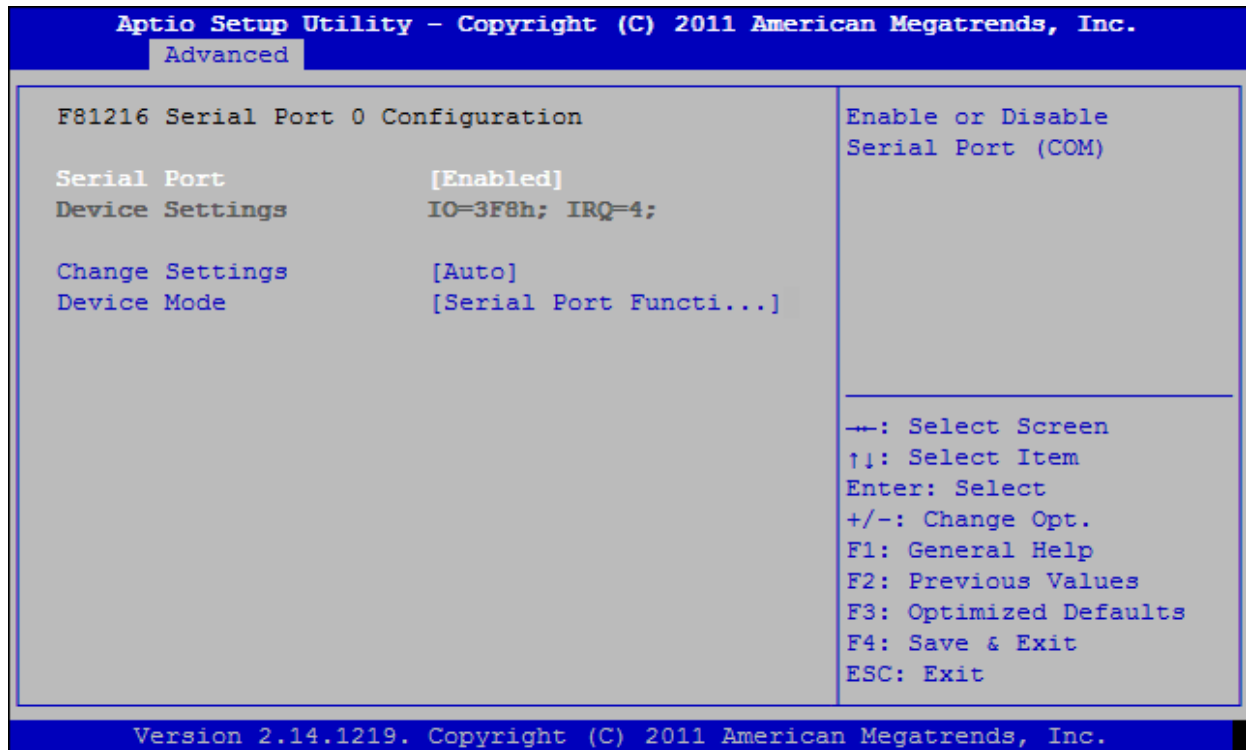

Feature	Options	Description
Legacy USB Support	Enabled Disabled Auto	Enabled Legacy USB support. Auto option disables Legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications.
EHCI Hand-off	Enabled Disabled	This is a workaround for OSes without EHCI hand-off support. The EHCI ownership change should be claimed by EHCI driver.
Port 60/64 Emulation	Enabled Disabled	Enables I/O port 60h/64h emulation support. This should be enabled for the complete USB keyboard legacy support for non-USB aware OEs.
USB transfer time-out	1 sec 5 sec 10 sec 20 sec	The time-out value for Control, Bulk, and Interrupt transfers.
Device reset time-out	10 sec 20 sec 30 sec 40 sec	USB mass storage device Start Unit command time-out.
Device power-up delay	Auto Manuel	Maximum time the device will take before it properly reports itself to the Host Controller. "Auto" uses default value: for a Root port it is 100 ms, for a Hub port the delay is taken from Hub description.

F81216 Super IO Configuration

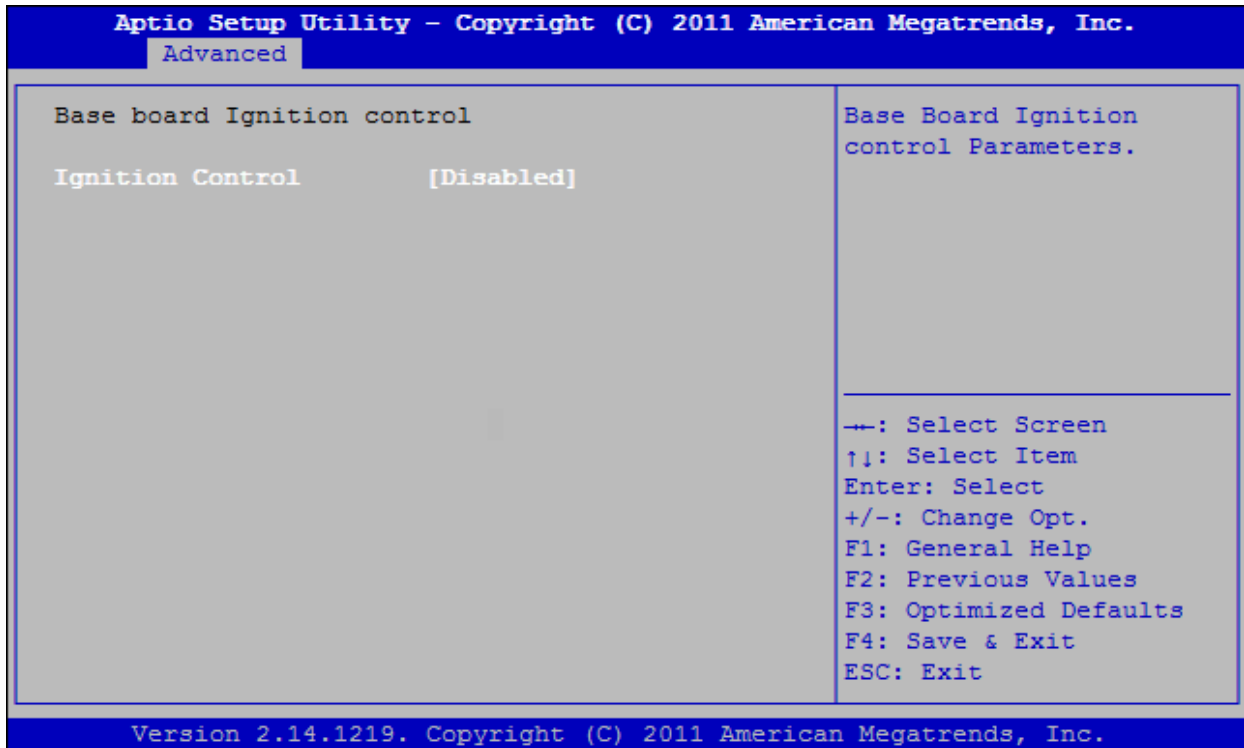

F81216 Serial Port X Configuration

Feature	Options	Description
Serial Port	Enabled Disabled	Enable or Disable Serial Port (COM).
Change Settings	Auto IO=3F8h; IRQ=4; IO=3F8h; IRQ= 3, 4, 5, 6, 7, 10, 11, 12; IO=2F8h; IRQ=3, 4, 5, 6, 7, 10, 11, 12; IO=3E8h; IRQ= 3, 4, 5, 6, 7, 10, 11, 12; IO=2E8h; IRQ=3, 4, 5, 6, 7, 10, 11, 12;	Select an optimal Setting for Super IO device.
Device Mode	Serial Port Funktion Mode IR Mode, Pusle 1.6 us, Full Duplex IR Mode, Pusle 1.6 us, Half Duplex IR Mode, Pusle 3/16 Bit Time, Full Duplex IR Mode, Pusle 3/16 Bit Time, Half Duplex	Change the Serial Port mode.

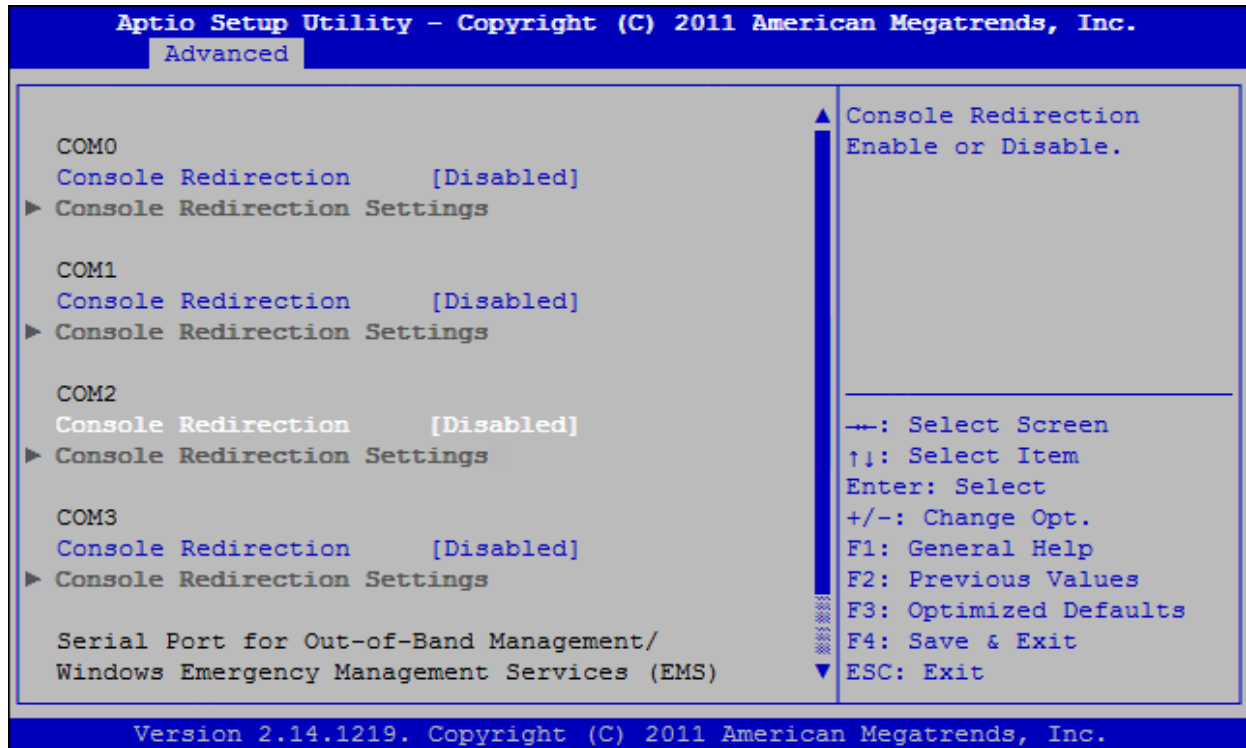

Interface Mode	RS232 RS422 RS485	Choose interface mode.
----------------	--------------------------------	------------------------

Base board Ignition control

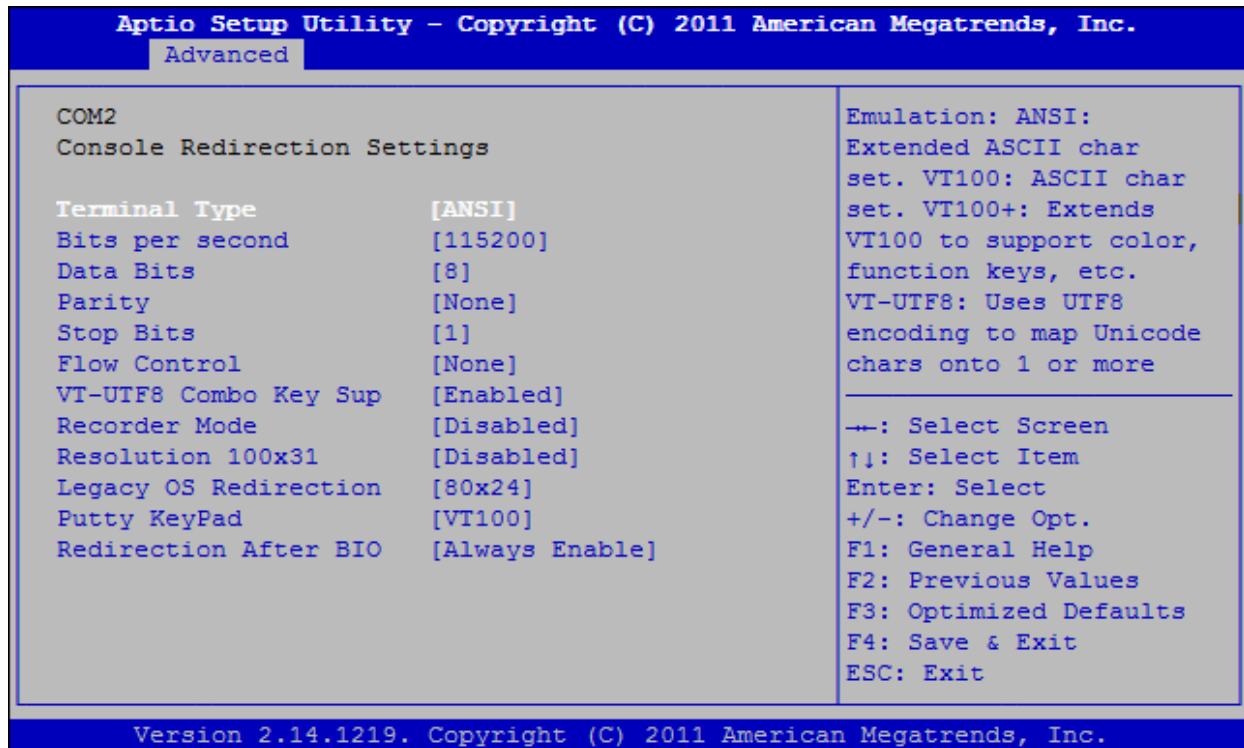

Feature	Options	Description
Ignition Control	Enabled Disabled	Base Board Ignition control Parameters

Serial Port Console Redirection

Feature	Options	Description
COM0 Console Redirection	Enabled Disabled	Console Redirection Enable or Disable.
COM1 Console Redirection	Enabled Disabled	Console Redirection Enable or Disable.
COM2 Console Redirection	Enabled Disabled	Console Redirection Enable or Disable.
COM3 Console Redirection	Enabled Disabled	Console Redirection Enable or Disable.

COMX Console Redirection Settings

Feature	Options	Description
Terminal Type	VT100 VT100+ VT-UTF8 ANSI	Emulation: ANSI: Extended ASCII char set. VT100: ASCII char set. VT100+: Extends VT100 to support color, function keys, etc. VT-UTF8: Uses UTF8 encoding to map Unicode chars
Bits per second	9600 19200 38400 57600 115200	Selects serial port transmission speed. The speed must be matched on the other side. Long or noisy lines may require lower speeds.
Data Bits	7 8	Data Bits
Parity	None Even Odd Mark Space	A parity bit can be sent with the data bits to detect some transmission errors.
Stop Bits	1 2	Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1.
Flow Control	None Hardware RTS/CTS	Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a "stop"

		signal can be sent to stop the data flow.
VT-UTF8 Combo Key Sup	Disabled Enabled	Enable VT-UTF8 Combination Key Support for ANSI/VT100 terminals
Recorder mMode	Disabled Enabled	On this mode enabled only text will be send. This is to capture Terminal data.
Resolution 100x31	Disabled Enabled	Enables or disables extended terminal resolution
Legacy OS Redirection	80x24 80x25	On Legacy OS, the Number of Rows and Columns supported redirection
Putty KeyPad	VT100 LINUX XTERMR6 SCO ESCN VT400	Select FunctionKey and KeyPad on Putty
Redirection After BIO	Always Enable BootLoader	The Settings specify if BootLoader is selected than Legacy console redirection is disabled before booting to Legacy OS.

Feature	Options	Description
HD Audio Controller	Enabled Disabled	HD Audio Controller
USB Function	Disabled 2 USB Ports 4 USB Ports 6 USB Ports 7 USB Ports	Enable or disable USB Function
USB 2.0 (EHCI) Support	Enabled Disabled	Enable or disabled USB 2.0 (EHCI) Support.
SMBus Controller	Enabled Disabled	Enable or disable onchip SMBus Controller
82567 GbE Controller	Enabled Disabled	Enable or disable onchip 82567 GbE Controller.
Launch 82567 PXE Op	Disabled Enabled	Enable or disable Boot Option for Intel 82567 Network Device.
Launch 82574 PXE Op	Disabled Enabled	Enable or Disable Boot Option for Intel 82574 Network Device.

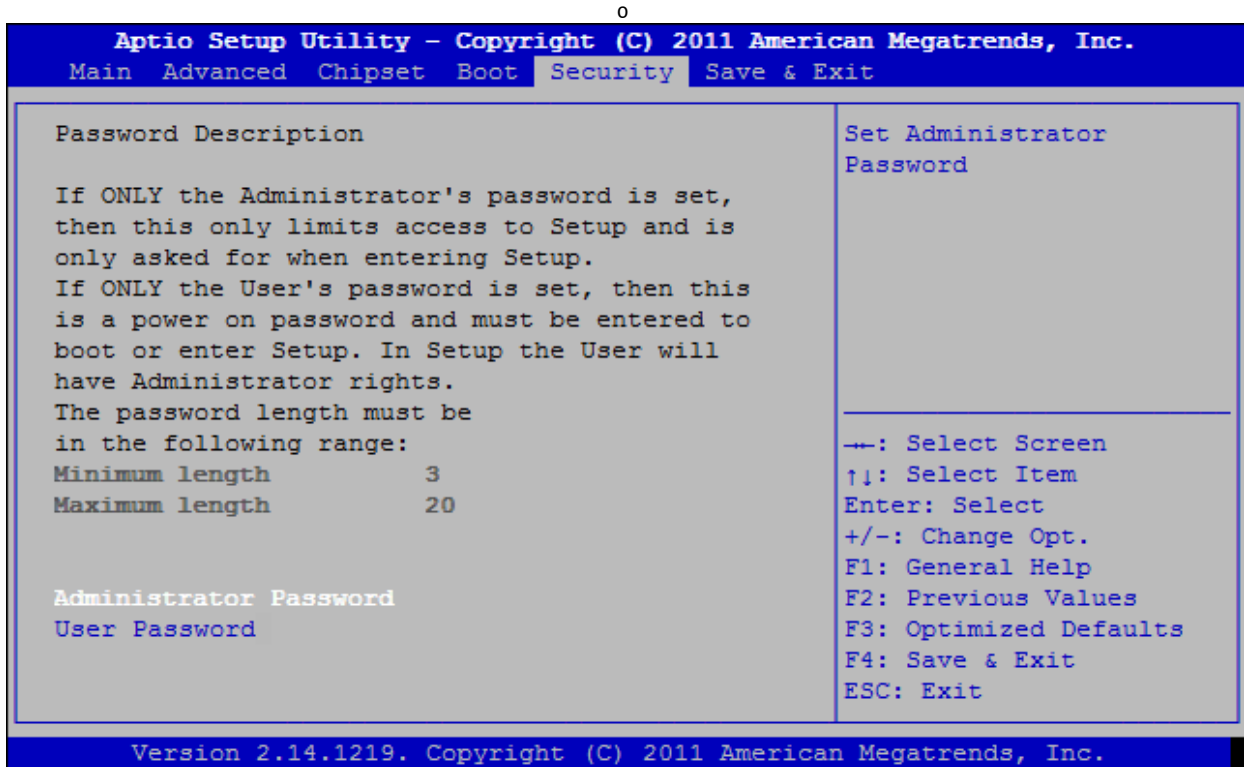

PCI Express Port 0	Auto Enabled Disabled	Enable or disable PCI Express Root Port 0.
Port 0 IOxAPIC	Disabled Enabled	Enable or disable PCI Express Port 0 IO APIC
PCI Express Port 1	Auto Enabled Disabled	Enable or disable PCI Express Root Port 1.
Port 1 IOxAPIC	Disabled Enabled	Enable or disable PCI Express Root Port 1 IO APIC
PCI Express Port 2	Auto Enabled Disabled	Enable or disable PCI Express Root Port 2.
Port 2 IOxAPIC	Disabled Enabled	Enable or disable PCI Express Root Port 2 IO APIC.
PCI Express Port 3	Auto Enable Disable	Enable or disable PCI Express Root Port 3.
Port 3 IOxAPIC	Disabled Enabled	Enable or disable PCI Express Root Port 3 IO APIC
PCI Express Port 4	Auto Enabled Disabled	Enable or disable PCI Express Root Port 4
Port 4 IOxAPIC	Disabled Enabled	Enable or disable PCI Express Root Port 4 IO APIC.
PCI-Exp. High Priority Port	Disabled Port 0 Port 1 Port 2 Port 3 Port 4 Port 5	Select a PCI Express High Priority Port.
High Precision Timer	Disabled Enabled	Enable or disable the High Precision Event Timer.
SLP_S4 Assertion Width	1-2 Seconds 2-3 Seconds 3-4 Seconds 4-5 Seconds	Select a minimum assertion width of the SLP_S4# signal
Restore AC Power Loss	Power Off Power On Last State	Select AC power state when power is re-applied after a power failure.

6.3.4 Boot Menu

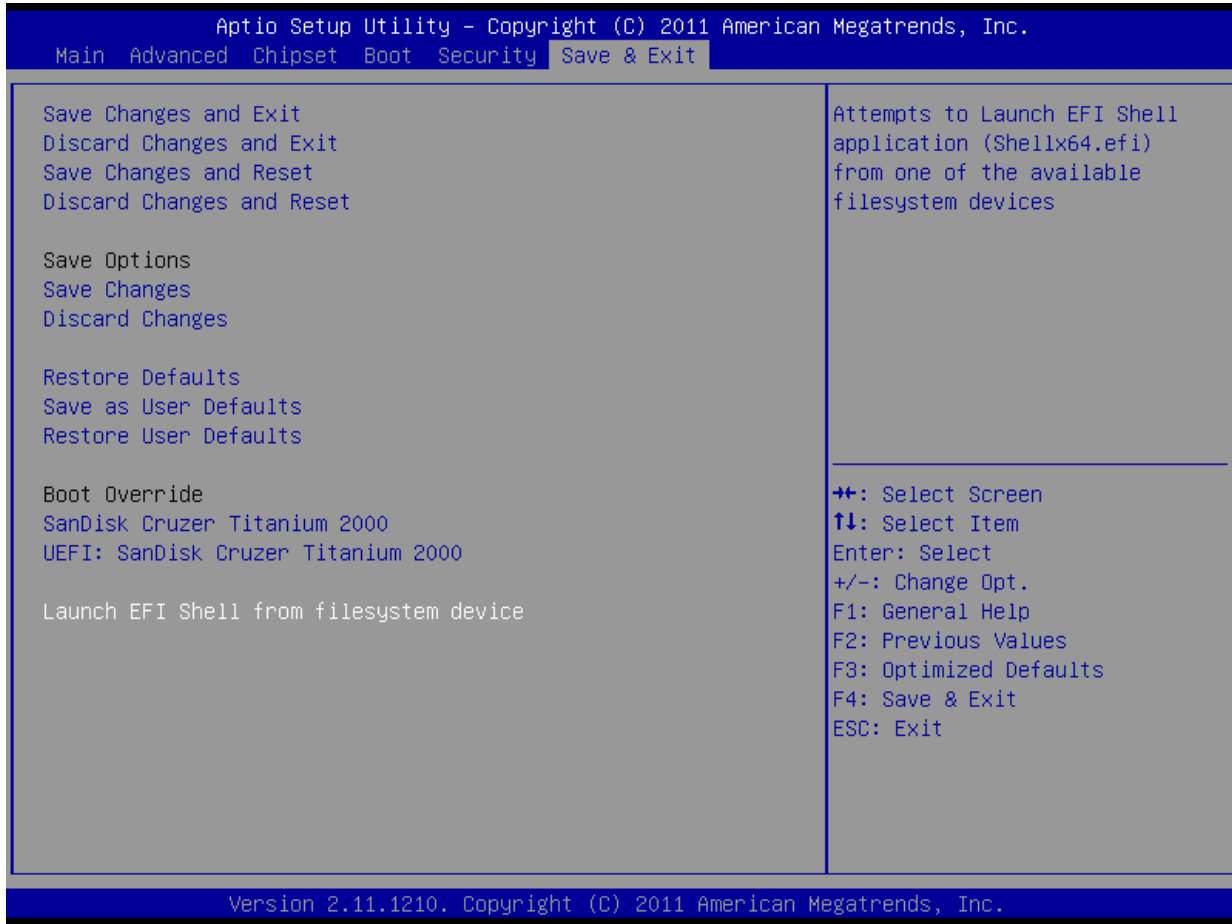

Feature	Options	Description
Setup Prompt Timeout	1	Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting.
Bootup NumLock State	On OFF	Select the keyboard NumLock state.
Quiet Boot	Disabled Enabled	Enables or disables Quiet Boot option
Gate A20 Active	Upon Request Always	UPON REQUEST – GA20 can be disabled using BIOS services. ALWAYS – do not allow disabling GA20; this option is useful when any RT code is executed above 1MB.
Option ROM Messages	Force BIOS Keep Current	Set display mode for Option ROM
INT19 Trap Response	Immediate Postponed	BIOS reaction on INT19 trapping by Option ROM: IMMEDIATE – execute the trap right away; POSTPONED - execute the trap during legacy boot.
CSM Support	Disabled Enabled Auto	Enable/Disable CSM Support. If Auto is selected, based on OS, CSM will be enabled/disabled automatically.
Boot Option #1	UEFI: Built-in EFI Shell Disabled	Sets the system boot order

6.3.5 Security Menu

Feature	Options	Description
Administrator		Set Administrator Password
User Password		Set User Password

6.3.6 Exit Menu

Feature	Description
Save Changes and Reset	Exit utility and save your changes to CMOS.
Discard Changes and Exit	Exit utility without saving setup data to CMOS.
Save Changes	Save setup data to CMOS.
Discard Changes	Load previous values from CMOS for all setup items.
Load Setup Defaults	Load default values for all setup items.

6.4 BIOS Update

Before downloading a BIOS, please check the following:

Make a bootable diskette which includes the following files:

- » DLDELEP.exe
- » afudos.exe
- » core BIOS (MSMLPxxx.ROM)
- » Rename the MSMLPxxx.ROM file to bios.rom

IMPORTANT: Do not use boot disks created in a Windows operating system. If you do not have an MSDOS 6.22 disk available, you can download a boot disk from www.bootdisk.com.

Notes:

- » Disable the EMM386 or other memory managers in the CONFIG.SYS of your boot disk.
- » Make sure that the AFUDOS.exe program and the BIOS are in the same path and directory!
- » Boot DOS without config.sys and autoexec.bat. (Press **F5** while starting the DOS boot).

Start the DOWNLOADING process:

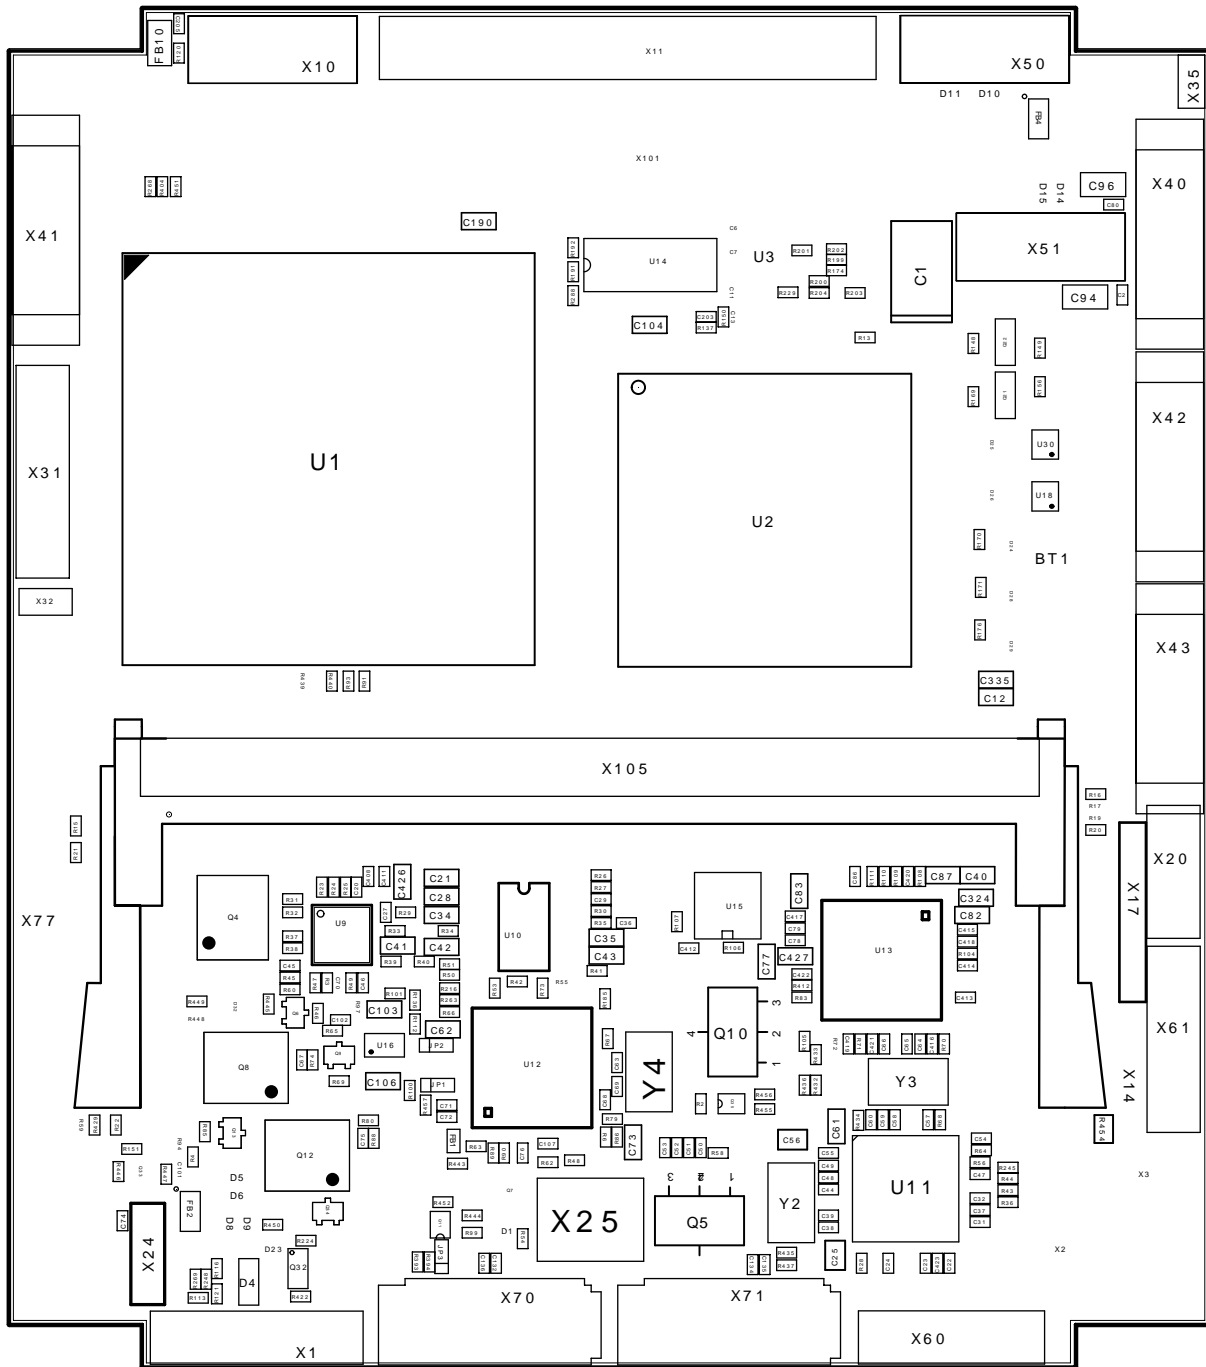

1. Start the system using the bootable diskette.
2. Run DLDELEP.exe to clear the CMOS and the EEPROM.

WARNING: If you do not run DLDELEP.exe, the system will be destroyed during the BIOS upgrade!

3. Run AFUDOS.EXE BIOS.ROM /X/B/P/N.
4. Reboot the system and press **DEL** to enter the setup mode. Set the default values by pressing **F3**.
5. "Save and exit" the setup by pressing **F4**.
6. Reboot the system.

7 Appendix A: Assembly Views

7.1 Top

8 Appendix: Document Revision History

Document Revision History			
Revision	Date	Edited by	Changes
100	12.Oct.2011	WAS	Intial released version
101	29.Nov.2011	WAS	BRM: table in Section 4.3.1 corrected. AVM: 4GB DDR3 correction. BRW: clarification of Watchdog timeout settings.
102	01.Mar.2012	WAS/MEG	NK 10957: Eval Kit has PCI-104 assembled. MEG: X24 connector description. WAS: Assembly diagrams enhanced.
103	16.May.2012	WAF/VIV	Adoption to version V1.1. WAF: Modules added. Renumbering of connectors. Backlight connector X12, analog output changed to PWM. COM3 / 4 swapped on PCB. Fan connector X24: voltage changed to 5V. Remarks for system boards. Jumper adopted to V1.1. Power information FPC connector X11and Backlight connector X12 changed. VIV: New chapter 4.1 KeAPI , chaper 4.4.1 I/O Control Access changed
104	04.Sep.2013	UMA	Changed to new Kontron Corporate Design, updated drawings
105	12.Nov.2013	UMA	Added BIOS description
106	10.Dez.2013	UMA	Removed SSD option
