Doc. Rev. 1.0 (CBW6M100)

Doc. ID: 1060-3230

 COME-CBW6 USER GUIDE

Kontron AG would like to point out that the information contained in this manual may be subject to technical alteration, particularly as a result of the constant upgrading of Kontron AG products. The attached documentation does not entail any guarantee on the part of Kontron AG with respect to technical processes described in the manual or any product characteristics set out in the manual. Kontron AG does not accept any liability for any printing errors or other inaccuracies in the manual unless it can be proven that Kontron AG is aware of such errors or inaccuracies or that Kontron AG is unaware of these as a result of gross negligence and Kontron AG has failed to eliminate these errors or inaccuracies for this reason. Kontron AG expressly informs the user that this manual only contains a general description of technical processes and instructions which may not be applicable in every individual case. In cases of doubt, please contact Kontron AG.

This manual is protected by copyright. All rights are reserved by Kontron AG. Copies of all or part of this manual or translations into a different language may only be made with the prior written consent of Kontron AG. Kontron AG points out that the information contained in this manual is constantly being updated in line with the technical alterations and improvements made by Kontron AG to the products and thus this manual only reflects the technical status of the products by Kontron AG at the time of printing.

Symbols

The following symbols may be used in this manual:

⚠ DANGER

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING

WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION

CAUTION indicates a hazardous situation which, if not avoided, may result in minor or moderate injury.

NOTICE

NOTICE indicates a property damage message.

Electric Shock!

This symbol and title warn of hazards due to electrical shocks (> 60 V) when touching products or parts of them. Failure to observe the precautions indicated and/or prescribed by the law may endanger your life/health and/or result in damage to your material.

Please refer also to the "High-Voltage Safety Instructions" portion below in this section.

ESD Sensitive Device!

This symbol and title inform that the electronic boards and their components are sensitive to static electricity. Care must therefore be taken during all handling operations and inspections of this product in order to ensure product integrity at all times.

This symbol indicates general information about the product and the user manual.

This symbol also indicates detail information about the specific product configuration.

This symbol precedes helpful hints and tips for daily use.

1/ User Information

1.1. About This Document

This document provides information about products from Kontron AG and/or its subsidiaries. No warranty of suitability, purpose, or fitness is implied. While every attempt has been made to ensure that the information in this document is accurate, the information contained within is supplied "as-is" and is subject to change without notice.

For the circuits, descriptions and tables indicated, Kontron assumes no responsibility as far as patents or other rights of third parties are concerned.

1.2. Copyright Notice

Copyright © 2003-2016 Kontron AG

All rights reserved. No part of this document may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means (electronic, mechanical, photocopying, recording, or otherwise), without the express written permission of Kontron AG.

DIMM-PC®, PISA®, ETX®, ETXexpress®, microETXexpress®, X-board®, DIMM-IO® and DIMM-BUS® are trademarks or registered trademarks of Kontron AG. Kontron is trademark or registered trademark of Kontron AG.

1.3. Trademarks

The following lists the trademarks of components used in this board.

- ▶ IBM, XT, AT, PS/2 and Personal System/2 are trademarks of International Business Machines Corp.
- ▶ Microsoft is a registered trademark of Microsoft Corp.
- ▶ Intel is a registered trademark of Intel Corp.
- ▶ All other products and trademarks mentioned in this manual are trademarks of their respective owners.

1.4. Standards

Kontron AG is certified to ISO 9000 standards.

1.5. Warranty

For this Kontron AG product warranty for defects in material and workmanship exists as long as the warranty period, beginning with the date of shipment, lasts. During the warranty period, Kontron AG will decide on its discretion if defective products are to be repaired or replaced.

Within the warranty period, the repair of products is free of charge as long as warranty conditions are observed.

Warranty does not apply for defects arising/resulting from improper or inadequate maintenance or handling by the buyer, unauthorized modification or misuse, as well as the operation outside of the product's environmental specifications and improper installation and maintenance.

Kontron AG will not be responsible for any defects or damages to other products not supplied by Kontron AG that are caused by a faulty Kontron AG product.

2/ Introduction

2.1. Product Description

The standard design of the COM Express® compact modules – Kontron COMe-cBW6 – supports the entire portfolio of Intel® Pentium® and Celeron® Processor N3000 series. Integrated Intel® HD Graphic Gen 8 with 3 independent display support for general mobile embedded applications. The memory of up to 2x 4GB has been laid out as dual-channel DDR3L SODIMM. With onboard eMMC Flash option, SD card slot and 2x SATA3 ample storage options for OS and application software are available. Substantial USB support is also offered with 4x USB 3.0/2.0 and 4x USB 2.0.

2.2. Naming clarification

COM Express® defines a Computer-On-Module, or COM, with all components necessary for a bootable host computer, packaged as a super component.

- ▶ COMe-bXX# modules are Kontron's COM Express® modules in basic form factor (125mm x 95mm)
- ▶ COMe-cXX# modules are Kontron's COM Express® modules in compact form factor (95mm x 95mm)
- ▶ COMe-mXX# modules are Kontron's COM Express® modules in mini form factor (55mm x 84mm)

The product names for Kontron COM Express® Computer-on-Modules consist of a short form of the industry standard (**COMe-**), the form factor (**b**=basic, **c**=compact, **m**=mini), the capital letters for the CPU and Chipset Codenames (**XX**) and the pin-out type (**#**) followed by the CPU Name.

2.3. Understanding COM Express® Functionality

All Kontron COM Express® basic and compact modules contain two 220pin connectors; each of it has two rows called Row A & B on primary connector and Row C & D on secondary connector. COM Express® Computer-on-modules feature the following maximum amount of interfaces according to the PICMG module Pin-out type:

Feature	Pin-Out Type 1	Pin-Out Type 10	Pin-Out Type 2	Pin-Out Type 6
HD Audio	1x	1x	1x	1x
Gbit Ethernet	1x	1x	1x	1x
Serial ATA	4x	4x	4x	4x
Parallel ATA	-	-	1x	-
PCI	-	-	1x	-
PCI Express x1	6x	6x	6x	8x
PCI Express x16 (PEG)	-	-	1x	1x
USB Client	1x	1x	-	-
USB 2.0	8x	8x	8x	8x
USB 3.0	-	2x	-	4x
VGA	1x	-	1x	1x
LVDS	Dual Channel	Single Channel	Dual Channel	Dual Channel
DP++ (SDVO/DP/HDMI/DVI)	1x optional	1x	3x shared with PEG	3x
LPC	1x	1x	1x	1x
External SMB	1x	1x	1x	1x
External I2C	1x	1x	1x	1x
GPIO	8x	8x	8x	8x
SDIO shared w/GPIO	1x optional	1x optional	-	1x optional
UART (2-wire COM)	-	2x	-	2x
FAN PWM out	-	1x	-	1x

2.4. COM Express® Documentation

This product manual serves as one of three principal references for a COM Express® design. It documents the specifications and features of COMe-cBW6. Additional references are available at your Kontron Support or at PICMG®:

- ▶ The COM Express® Specification defines the COM Express® module form factor, pin-out, and signals. This document is available at the PICMG® website by filling out the order form.
- ▶ The COM Express® Design Guide by PICMG® serves as a general guide for baseboard design, with a focus on maximum flexibility to accommodate a wide range of COM Express® modules.

Some of the information contained within this product manual applies only to certain product revisions (CE: xxx). If certain information applies to specific product revisions (CE: xxx) it will be stated. Please check the product revision of your module to see if this information is applicable.

2.5. COM Express® Benefits

COM Express® modules are very compact, highly integrated computers. All Kontron COM Express® modules feature a standardized form factor and a standardized connector layout which carry a specified set of signals. Each COM is based on the COM Express® specification. This standardization allows designers to create a single-system baseboard that can accept present and future COM Express® modules.

The baseboard designer can optimize exactly how each of these functions implements physically. Designers can place connectors precisely where needed for the application on a baseboard designed to optimally fit a system's packaging.

A single baseboard design can use a range of COM Express® modules with different sizes and pin-outs. This flexibility can differentiate products at various price/performance points, or when designing future proof systems that have a built-in upgrade path. The modularity of a COM Express® solution also ensures against obsolescence when computer technology evolves. A properly designed COM Express® baseboard can work with several successive generations of COM Express® modules.

A COM Express® baseboard design has many advantages of a customized computer-board design and, additionally, delivers better obsolescence protection, heavily reduced engineering effort, and faster time to market.

3/ Product Specification

3.1. Module definition

The COM Express® compact sized Computer-on-Module COMe-cBW6 (CBW6) follows pin-out Type 6 and is compatible to PICMG specification COM.0 Rev 2.1. The COMe-cBW6 based on latest platform is available in different variants to cover the demand of different performance, price and power:

Commercial grade modules (0°C to 60°C operating)

Part Number	Product Name	Processor	Memory	eMMC	TPM	mSD Socket	VGA analog	USB 2.0	USB 3.0

3.2. Functional Specification

3.2.1. Processor

The 14nm Intel® Atom Celeron embedded (Braswell) CPU family with 25x27mm package size (FCBGA1170) supports:

- ▶ Intel® 64
- ▶ Intel® Virtualization Technology (VT-x)
- ▶ Enhanced Intel SpeedStep® Technology
- ▶ Idle States (C-States)
- ▶ Thermal Monitoring Technologies

Optional available (with customized BIOS):

- ▶ Advanced Encryption Standard Instructions (AES-NI)

The integrated Intel® HD Graphics supports:

- ▶ GraphicsTechnology with 12 Execution Units
- ▶ DirectX Support
- ▶ OpenGL Support
- ▶ # of Displays Supported: 3

3.2.2. Memory

Sockets	Up to 2x DDR3L SO-DIMM (depending on variant)
Memory Type	DDR3L-1333/1600
Maximum Size	2x4GB
Technology	Dual Channel

3.2.3. Graphics Core

The integrated Intel® HD Graphics (Gen 8LP) supports:

Graphics Core Render Clock	Intel® HD Graphics (Gen 8LP)
Execution Units / Pixel Pipelines	GT1 16EU
Max Graphics Memory	tbd
GFX Memory Bandwidth (GB/s)	tbd
GFX Memory Technology	DVMT
API (DirectX/OpenGL)	11.1
Shader Model	3.0
Hardware accelerated Video	H.264 / MPEG2 / VC1 / VP8
Independent/Simultaneous Displays	3
Display Port	tbd
HDCP support	HDCP / PAVP 2 (optional)

3.2.4. Monitor Output

CRT max Resolution	1920x1200@60Hz
TV out:	-

3.2.5. LVDS

LVDS Bits/Pixel	1x18/24, 2x18/24 with DP2LVDS
LVDS Bits/Pixel with dithering	-
LVDS max Resolution:	1920x1200
PWM Backlight Control:	YES
Supported Panel Data:	EDID/DID

3.2.6. Display Interfaces

Discrete Graphics	-
Digital Display Interface DDI1	DP++
Digital Display Interface DDI2	DP++ (optional VGA)
Digital Display Interface DDI3	-
Maximum Resolution on DDI	HDMI: 3840x2160 @30Hz, DP: 3840x2160 @ 30Hz

3.2.7. Storage

onboard SSD	2-64GB eMMC
SD Card support	1x mSD Socket onboard
IDE Interface	-
Serial-ATA	2x SATA 6Gb/s
SATA AHCI	AHCI
SATA RAID	-

3.2.8. Connectivity

USB 2.0	8x USB 2.0, no legacy EHCI controller (may cause installation problems under some OS, Win7)
USB 3.0	4x USB 3.0
USB Client	-
PCI	-
PCI External Masters	-
PCI Express	3x PCIe x1 Gen2, no hot plug (Express Card) supported
Max PCI Express	4x PCIe x1 without LAN
PCI Express x2/x4 configuration	YES
Ethernet	10/100/1000 Mbit
Ethernet controller	Intel® i211AT

3.2.9. Ethernet

The Intel® i211AT Ethernet supports:

- ▶ Jumbo Frames - 9K
- ▶ MACsec IEEE 802.1 AE
- ▶ Time Sync Protocol Indicator
- ▶ WOL (Wake On LAN)
- ▶ PXE (Preboot eXecution Environment)
- ▶ IEEE1588

3.2.10. Misc. Interfaces and Features

Supported BIOS Size/Type	8MB SPI
Audio	HD Audio
Onboard Hardware Monitor	Nuvoton NCT7802Y
Miscellaneous	2x UART / PWM FAN

3.2.11. Kontron Features

External I2C Bus	Fast I2C, MultiMaster capable
Smart Battery (M.A.R.S.) support	YES
Embedded API	KEAPI3
Custom BIOS Settings / Flash Backup	YES
Watchdog support	Dual Staged

3.2.12. Additional Features

- ▶ All solid capacitors (POSCAP). No tantalum capacitors used.
- ▶ Optimized RTC Battery monitoring to secure highest longevity
- ▶ Real fast I2C with transfer rates up to 40kB/s.

3.2.13. Power Features

Singly Supply Support	YES
Supply Voltage	8.5V - 20V
ACPI	ACPI 3.0
S-States	S0, S3, S4, S5
S5 Eco Mode	YES
Misc Power Management	DPST 4.0, iFFS

3.2.14. Power Consumption and Performance

Full Load Power Consumption	tbd
Kontron Performance Index	tbd
Kontron Performance/Watt	tbd

*Measured Values. Please note the maximum Power Consumption with activated Turbo Mode in chapter Turbo 2.0

Detailed Power Consumption measurements in all states and benchmarks for CPU, Graphics and Memory performance are available in Application Note KEMAP054 at EMD Customer Section.

3.4.2. General accessories

Part Number	COMe pin-out Type 6 compatible accessories	Project Code	Comment
38114-0000-00-0	COM Express® Reference Carrier Type 6	ADAS	mITX Carrier with 8mm COMe connector
38106-0000-00-0	COM Express® Eval Carrier Type 6	Topanga Canyon	ATX Carrier with 5mm COMe connector
96007-0000-00-3	ADA-PCIe-DP	APDP	PCIe x16 to DP Adapter for Evaluation Carrier
96007-0000-00-7	ADA-Type6-DP3	DV06	(sandwich) Adapter Card for 3x DisplayPort
96006-0000-00-2	COMe POST T6	NFCB	POST Code / Debug Card
38019-0000-00-0	ADA-COMe-Height-dual	EERC	Height Adapter
38106-0000-00-5	COMe Eval Starterkit T6	Topanga Canyon	Starterkit with COMe Evaluation Carrier T6
38114-0000-00-5	COMe Ref. Starterkit T6	ADAS	Starterkit with COMe Reference Carrier T6

Part Number	Mounting	Comment
38017-0000-00-5	COMe Mount KIT 5mm 1set	Mounting Kit for 1 module including screws for 5mm connectors
38017-0100-00-5	COMe Mount KIT 5mm 100sets	Mounting Kit for 100 modules including screws for 5mm connectors
38017-0000-00-0	COMe Mount KIT 8mm 1set	Mounting Kit for 1 module including screws for 8mm connectors
38017-0100-00-0	COMe Mount Kit 8mm 100sets	Mounting Kit for 100 modules including screws for 8mm connectors

Part Number	Cooling Solutions	Comment
36099-0000-99-0	COMe Active Uni Cooler	for CPUs up to 20W TDP, to be mounted on HSP
36099-0000-99-1	COMe Passive Uni Cooler	for CPUs up to 10W TDP, to be mounted on HSP

Part Number	Display Adapter	Comment
9-5000-0352	ADA-LVDS-DVI 18bit	LVDS to DVI converter
9-5000-0353	ADA-LVDS-DVI 24bit	LVDS to DVI converter
96006-0000-00-8	ADA-DP-LVDS	DP to LVDS adapter
96082-0000-00-0	KAB-ADAPT-DP-DVI	DP to DVI adapter cable
96083-0000-00-0	KAB-ADAPT-DP-VGA	DP to VGA adapter cable
96084-0000-00-0	KAB-ADAPT-DP-HDMI	DP to HDMI adapter cable

Part Number	Cables	Comment
96079-0000-00-0	KAB-HSP 200mm	Cable adapter to connect FAN to module (COMe basic/compact)
96079-0000-00-2	KAB-HSP 40mm	Cable adapter to connect FAN to module (COMe basic/compact)

Part Number	Miscellaneous	Comment
18029-0000-00-0	MARS Smart Battery Kit	Starterkit Kontron Mobile Application platform for Rechargeable Systems

Part Number	DDR3L SODIMM, commercial temperature grade
97015-2048-16-1	DDR3L-1600 SODIMM 2GB
97015-4096-16-1	DDR3L-1600 SODIMM 4GB
97015-8192-16-1	DDR3L-1600 SODIMM 8GB

3.5. Electrical Specifications

3.5.1. Supply Voltage

Following supply voltage is specified at the COM Express® connector:

VCC:	8.5 - 20V
Standby:	5V DC +/- 5%
RTC:	2.5V - 3.47V

-
- 5V Standby voltage is not mandatory for operation.
 - Extended Temperature (E1) variants are validated for 12V supply only
-

3.5.2. Power Supply Rise Time

- ▶ The input voltages shall rise from ≤10% of nominal to within the regulation ranges within 0.1ms to 20ms.
- ▶ There must be a smooth and continuous ramp of each DC input voltage from 10% to 90% of its final set-point following the ATX specification

3.5.3. Supply Voltage Ripple

- ▶ Maximum 100 mV peak to peak 0 – 20 MHz

3.5.4. Power Consumption

The maximum Power Consumption of the different COMe-cBW6 variants is tbd (100% CPU load on all cores; 90°C CPU temperature). Further information with detailed measurements are available in Application Note KEMAP054 available on EMD Customer Section. Information there is available after registration.

3.5.5. ATX Mode

By connecting an ATX power supply with VCC and 5VSB, PWR_OK is set to low level and VCC is off. Press the Power Button to enable the ATX PSU setting PWR_OK to high level and powering on VCC. The ATX PSU is controlled by the PS_ON# signal which is generated by SUS_S3# via inversion. VCC can be 8.5 - 20V in ATX Mode. On Computer-on-Modules supporting a wide range input down to 4.75V the input voltage shall always be higher than 5V Standby (VCC > 5VSB).

State	PWRBTN#	PWR_OK	V5_StdBy	PS_ON#	VCC
G3	x	x	0V	x	0V
S5	high	low	5V	high	0V
S5 → S0	PWRBTN Event	low → high	5V	high → low	0 V → VCC
S0	high	high	5V	low	VCC

3.5.6. Single Supply Mode

In single supply mode (or automatic power on after power loss) without 5V Standby the module will start automatically when VCC power is connected and Power Good input is open or at high level (internal PU to 3.3V). PS_ON# is not used in this mode and VCC can be 8.5 - 20V.

To power on the module from S5 state press the power button or reconnect VCC. Suspend/Standby States are not supported in Single Supply Mode.

State	PWRBTN#	PWR_OK	V5_StdBy	VCC
G3	x	x	x	0
G3 → S0	high	open / high	x	connecting VCC
S5	high	open / high	x	VCC
S5 → S0	PWRBTN Event	open / high	x	reconnecting VCC

Signals marked with "x" are not important for the specific power state. There is no difference if connected or open.

All ground pins have to be tied to the ground plane of the carrier board.

3.6. Power Control

3.6.1. Power Supply

The COMe-cBW6 supports a power input from 8.5 – 20V. The supply voltage is applied through the VCC pins (VCC) of the module connector.

3.6.2. Power Button (PWRBTN#)

The power button (Pin B12) is available through the module connector described in the pinout list. To start the module via Power Button the PWRBTN# signal must be at least 50ms ($50\text{ms} \leq t < 4\text{s}$, typical 400ms) at low level (Power Button Event).

Pressing the power button for at least 4seconds will turn off power to the module (Power Button Override).

3.6.3. Power Good (PWR_OK)

The COMe-cBW6 provides an external input for a power-good signal (Pin B24). The implementation of this subsystem complies with the COM Express® Specification. PWR_OK is internally pulled up to 3.3V and must be high level to power on the module.

3.6.4. Reset Button (SYS_RESET#)

The reset button (Pin B49) is available through the module connector described in the pinout list. The module will stay in reset as long as SYS_RESET# is grounded. If available, the BIOS setting for "Reset Behavior" must be set to "Power Cycle".

Modules with Intel® Chipset and active Management Engine do not allow to hold the module in Reset out of S0 for a long time. At about 10s holding the reset button the ME will reboot the module automatically

3.6.5. SM-Bus Alert (SMB_ALERT#)

With an external battery manager present and SMB_ALERT# (Pin B15) connected the module always powers on even if BIOS switch "After Power Fail" is set to "Stay Off".

3.7. Environmental Specification

3.7.1. Temperature Specification

Kontron defines following temperature grades for Computer-on-Modules in general. Please see chapter 'Product Specification' for available temperature grades for the COMe-cBW6

Temperature Specification	Operating	Non-operating	Validated Input Voltage
Commercial grade	0°C to +60°C	-30°C to +85°C	VCC: 8.5 - 20V
Extended Temperature (E1)	-25°C to +75°C	-30°C to +85°C	VCC: 12V
Industrial grade by Screening (XT)	-40°C to +85°C	-40°C to +85°C	VCC: 12V
Industrial grade by Design (E2)	-40°C to +85°C	-40°C to +85°C	VCC: 8.5 - 20V

Operating with Kontron heat spreader plate assembly

The operating temperature defines two requirements:

- ▶ the maximum ambient temperature with ambient being the air surrounding the module.
- ▶ the maximum measurable temperature on any spot on the heatspreader's surface

Test specification:

Temperature Grade	Validation requirements
Commercial grade	at 60°C HSP temperature the CPU @ 100% load needs to run at nominal frequency
Extended Temperature (E1)	at 75°C HSP temperature the CPU @ 75% load is allowed to start speedstepping for thermal protection
Industrial grade by Screening (XT)	at 85°C HSP temperature the CPU @ 50% load is allowed to start throttling for thermal protection
Industrial grade by Design (E2)	at 85°C HSP temperature the CPU @ 50% load is allowed to start throttling for thermal protection

Operating without Kontron heat spreader plate assembly

The operating temperature is the maximum measurable temperature on any spot on the module's surface.

3.7.2. Humidity

- ▶ 93% relative Humidity at 40°C, non-condensing (according to IEC 60068-2-78)

3.8. Standards and Certifications

3.8.1. RoHS II

The **COMe-cBW6** is compliant to the directive 2011/65/EU on the Restriction of the use of certain Hazardous Substances (RoHS II) in electrical and electronic equipment

Figure 2: ROHS II symbol

3.8.2. Component Recognition UL 60950-1

The **COM Express® compact** form factor Computer-on-Modules are Recognized by Underwriters Laboratories Inc. Representative samples of this component have been evaluated by UL and meet applicable UL requirements.

UL Listings:

- ▶ NWGQ2.E304278
- ▶ NWGQ8.E304278

Figure 3: UL symbol

3.8.3. WEEE Directive

WEEE Directive 2002/96/EC is not applicable for Computer-on-Modules.

3.8.4. Conformal Coating

Conformal Coating is available for Kontron Computer-on-Modules and for validated SO-DIMM memory modules. Please contact your local sales or support for further details.

3.8.5. Shock & Vibration

The **COM Express® compact** form factor Computer-on-Modules successfully passed shock and vibration tests according to

- ▶ IEC/EN 60068-2-6 (Non operating Vibration, sinusoidal, 10Hz-4000Hz, +/-0.15mm, 2g)
- ▶ IEC/EN 60068-2-27 (Non operating Shock Test, half-sinusoidal, 11ms, 15g)

3.8.6. EMC

Validated in Kontron reference housing for EMC the **COMe-cBW6** follows the requirements for electromagnetic compatibility standards

- ▶ EN55022

3.9. MTBF

The following MTBF (Mean Time Before Failure) values were calculated using a combination of manufacturer's test data, if the data was available, and the Telcordia (Bellcore) issue 2 calculation for the remaining parts.

The calculation method used is "Telcordia Issue 2 Method 1 Case 3" in a ground benign, controlled environment (GB, GC). This particular method takes into account varying temperature and stress data and the system is assumed to have not been burned in.

Other environmental stresses (extreme altitude, vibration, salt water exposure, etc) lower MTBF values.

System MTBF (hours): tbd

Fans usually shipped with Kontron products have 50,000-hour typical operating life. The above estimates assume no fan, but a passive heat sinking arrangement. Estimated RTC battery life (as opposed to battery failures) is not accounted for in the above figures and need to be considered separately. Battery life depends on both temperature and operating conditions. When the Kontron unit has external power; the only battery drain is from leakage paths.

3.10. Mechanical Specification

3.10.1. Dimension

- ▶ 95.0 mm x 95.0 mm (3.75" x 3.75")
- ▶ Height approx. 13mm (0.4")

CAD drawings are available at EMD CustomerSection

3.10.2. Height

The COM Express® specification defines a module height of 13mm from bottom to heatspreader top:

Figure 4: Height of the COMe-cBW6 module

Cooling solutions provided from Kontron for compact sized Computer-on-Modules are 27mm in height from module bottom to Heatsink top. Universal Cooling solutions to be mounted on the HSP (36099-0000-00-x) are 14.3mm in height for an overall height of 27.3mm from module bottom to Heatsink top.

3.11. Module Dimensions

- ▶ Form Factor: COM Express® compact, pin-out Type 6
- ▶ Mechanical Size: 95x95mm

All dimensions in mm

3.12. Thermal Management, Heatspreader and Cooling Solutions

A heatspreader plate assembly is available from Kontron for the COMe-cBW6. The heatspreader plate on top of this assembly is NOT a heat sink. It works as a COM Express®-standard thermal interface to use with a heat sink or external cooling devices.

External cooling must be provided to maintain the heatspreader plate at proper operating temperatures. Under worst-case conditions, the cooling mechanism must maintain an ambient air and heatspreader plate temperature on any spot of the heatspreader's surface according the module specifications:

- ▶ 60°C for commercial grade modules
- ▶ 75°C for extended temperature grade modules (E1)
- ▶ 85°C for industrial temperature grade modules (E2/XT)

The aluminum slugs and thermal pads or the heat-pipe on the underside of the heatspreader assembly implement thermal interfaces between the heatspreader plate and the major heat-generating components on the COMe-cBW6. About 80 percent of the power dissipated within the module is conducted to the heatspreader plate and can be removed by the cooling solution.

You can use many thermal-management solutions with the heatspreader plates, including active and passive approaches. The optimum cooling solution varies, depending on the COM Express® application and environmental conditions. Active or passive cooling solutions provided from Kontron for the COMe-cBW6 are usually designed to cover the power and thermal dissipation for a commercial grade temperature range used in a housing with proper air flow.

Documentation and CAD drawings of COMe-cBW6 heatspreader and cooling solutions are provided at <http://emdcustomersection.kontron.com>.

4/ Features and Interfaces

4.1. Onboard eMMC Flash

The COMe-cBW6 features a 14x18mm onboard Micron NAND Flash drive with capacities of 2-64GB eMMC. The Flash drive includes a Phison PS8200 micro controller and supports:

- ▶ JEDEC/MMC standard version 5.0 compliant
- ▶ class 0 (basic); class 2 (block, read); class 4 (block write); class 5 (erase); class 6 (write protect); class 7 (lock card)
- ▶ MMCplus™ and MMCmobile™ protocols
- ▶ HS200/HS400 modes
- ▶ 52 MHz clock speed (MAX)
- ▶ Boot operation (high-speed boot)
- ▶ Sleep mode
- ▶ Replay-protected memory block (RPMB)
- ▶ Secure erase and secure trim
- ▶ Permanent and power-on write protection
- ▶ Double data rate (DDR) function
- ▶ Wear Leveling, ECC and block management
- ▶ -40°C to +85°C industrial temperature range
- ▶ Multi-Level-Cell (MLC) technology
- ▶ Single-Level-Cell (SLC) technology optional by firmware re-configuration during COMe-cBW6 manufacturing

Flash Part No.	MTFC4GACAAAM-4M IT	MTFC8GACAAAM-4M IT	MTFC16GAKAECN-4M IT	MTFC32GAKAECN-4M IT	MTFC64GAKAEY-4M IT
Nominal Flash Size MLC	4GByte	8GByte	16GByte	32GByte	64GByte
Nominal Flash Size pSLC	2GByte	4GByte	8GByte	16GByte	32GByte
Seq. MLC read speed/MB200	80 MB/s	120 MB/s	250 MB/s/160MB/s	250 MB/s/160MB/s	280 MB/s/160MB/s
Seq. MLC write speed/MB200	11 MB/s	24 MB/s	30 MB/s	40MB/s	50 MB/s / 40MB/s
I/O Performance read/write	4000 / 1000 IOPS	4000 / 1000 IOPS	4700 / 1200 IOPS	4700 / 1300 IOPS	4700 / 1300 IOPS
Endurance (# of P/E cycles)	MLC: 3k SLC: 40k	MLC: 3k SLC: 40k	MLC: 3k SLC: 40k	MLC: 3k SLC: 40k	MLC: 3k SLC: 40k

Notes:

- ▶ Random access of 4KB chunk, sequential read access of 1MB chunk
- ▶ Data based on Datasheet Micron eMMC Rev. E 6/14 E
- ▶ ~10% of the nominal flash size are reserved for Firmware and Block Management

Note: the onboard eMMC Flash requires pre-configuration via EFI Shell before OS installation (e.g. diskpart utility).

4.2. Secure Digital Card

The COMe-cBW6 supports an mSD card into the onboard micro SD Card socket as mass storage device, no boot device. Following SD cards are validated from Kontron and recommended for use:

4.3. S5 Eco Mode

Kontron's new high-efficient power-off state S5 Eco enables lowest power-consumption in soft-off state – less than 1 mA compared to the regular S5 state this means a reduction by at least factor 200!

In the "normal" S5 mode the board is supplied by 5V_Stb and needs usually up to 300mA just to stay off. This mode allows to be switched on by power button, RTC event and WakeOnLan, even when it is not necessary. The new S5 Eco mode reduces the current enormous.

The S5 Eco Mode can be enabled in BIOS Setup, when the BIOS supports this feature.

Following prerequisites and consequences occur when S5 Eco Mode is enabled:

- ▶ The power button must be pressed at least for 200ms to switch on.
- ▶ Wake via Power button only.
- ▶ "Power On After Power Fail" / "State after G3": only "stay off" is possible

4.4. LPC

The Low Pin Count (LPC) Interface signals are connected to the LPC Bus bridge located in the CPU or chipset. The LPC low speed interface can be used for peripheral circuits such as an external Super I/O Controller, which typically combines legacy-device support into a single IC. The implementation of this subsystem complies with the COM Express® Specification. Implementation information is provided in the COM Express® Design Guide maintained by PICMG. Please refer to the official PICMG documentation for additional information.

The LPC bus does not support DMA (Direct Memory Access) and a clock buffer is required when more than one device is used on LPC. This leads to limitations for ISA bus and SIO (standard I/O's like Floppy or LPT interfaces) implementations.

All Kontron COM Express® Computer-on-Modules imply BIOS support for following external baseboard LPC Super I/O controller features for the **Winbond/Nuvoton 5V 83627HF/G and 3.3V 83627DHG-P**:

83627HF/G	Phoenix BIOS	AMI CORE8	AMI / Phoenix EFI
PS/2	YES	YES	YES
COM1/COM2	YES	YES	YES
LPT	YES	YES	YES
HWM	YES	YES	NO
Floppy	NO	NO	NO
GPIO	NO	NO	NO
83627DHG-P	Phoenix BIOS	AMI CORE8	AMI / Phoenix EFI
PS/2	YES	YES	YES
COM1/COM2	YES	YES	YES
LPT	YES	YES	YES
HWM	NO	NO	NO
Floppy	NO	NO	NO
GPIO	NO	NO	NO

Features marked as not supported do not exclude OS support (e.g. HWM can be accessed via SMB). For any other LPC Super I/O additional BIOS implementations are necessary. Please contact your local sales or support for further details.

4.5. Serial Peripheral Interface (SPI)

The Serial Peripheral Interface Bus or SPI bus is a synchronous serial data link standard named by Motorola that operates in full duplex mode. Devices communicate in master/slave mode where the master device initiates the data frame. Multiple slave devices are allowed with individual slave select (chip select) lines. Sometimes SPI is called a “four wire” serial bus, contrasting with three, two, and one wire serial buses.

NOTICE

The SPI interface can only be used with a SPI flash device to boot from external BIOS on the baseboard

4.6. SPI boot

The COMe-cBW6 supports boot from an external SPI Flash. It can be configured by pin A34 (BIOS_DIS#0) and pin B88 (BIOS_DIS1#) in following configuration:

BIOS_DIS0#	BIOS_DIS1#	Function
open	open	Boot on-module BIOS
GND	open	Boot baseboard LPC FWH
open	GND	Baseboard SPI = Boot Device 1, on-module SPI = Boot Device 2
GND	GND	Baseboard SPI = Boot Device 2, on-module SPI = Boot Device 1

By default only SPI Boot Device 1 is used in configuration 3 & 4. Both SPI Boot Devices are used by splitting the BIOS with modified descriptor table in customized versions only.

4.6.1. Recommended SPI boot flash types for 8-SOIC package

Size	Manufacturer	Part Number	Device ID
16Mbit	Atmel	AT26DF161	0x1F4600

64Mbit	Winbond	W25Q64FW	0XEF6017

4.6.2. Using an external SPI flash

- ▶ To program an external SPI flash follow these steps:
- ▶ Connect a SPI flash with correct size (similar to BIOS ROM file size) to the module SPI interface
- ▶ Open pin A34 and B88 to boot from the module BIOS
- ▶ Enter setup and prepare flash area to be overwritten by changing these parameters:
- ▶ Chipset->South Bridge->Security-> BIOS Lock -> disable
 - Advanced->Security Configuration->TXE HMRFP0 -> enable
- ▶ Save and reboot
- ▶ Boot the module to DOS/EFI-Shell with access to the BIOS image and Firmware Update Utility provided on EMD Customer Section
- ▶ Connect pin B88 (BIOS_DIS1#) to ground to enable the external SPI flash
- ▶ Execute Flash.bat/Flash.efi to program the complete BIOS image to the external SPI flash
- ▶ Reboot

Your module will now boot from the external SPI flash when BIOS_DIS1# is grounded.

4.6.3. External SPI flash on Modules with Intel® ME

If booting from the external (baseboard mounted) SPI flash then exchanging the COM Express® module for another one of the same type will cause the Intel® Management Engine to fail during next start. This is by design of the ME because it bounds itself to the very module it has been flashed to. In the case of an external SPI flash this is the module present at flash time.

To avoid this issue please make sure to conduct a complete flash of the external SPI flash device after changing the COMexpress module for another one. If disconnecting and reconnecting the same module again this step is not necessary.

4.7. M.A.R.S.

The Smart Battery implementation for Kontron Computer-on-Modules called **Mobile Application for Rechargeable Systems** is a BIOS extension for external Smart Battery Manager or Charger. It includes support for SMBus charger/selector (e.g. Linear Technology LTC1760 Dual Smart Battery System Manager) and provides ACPI compatibility to report battery information to the Operating System.

Reserved SM-Bus addresses for Smart Battery Solutions on the carrier:

8-bit Address	7-bit Address	Device
12h	0x09	SMART_CHARGER
14h	0x0A	SMART_SELECTOR
16h	0x0B	SMART_BATTERY

4.8. UART

The COMe-cBW6 supports up to two Serial RX/TX only Ports defined in COM Express® specification on Pins A98/A99 for UART0 and Pins A101/A102 for UART1. The implementation of the UART is compatible to 16450 and is supported by default from most operating systems. Resources are subordinated to other UARTS e.g. from external LPC Super I/O.

UART Features:

- ▶ 450 to 115.2k Baud (except 56000)
- ▶ 5, 6, 7 or 8bit characters

- ▶ 1 or 2 Stop bit generation
- ▶ Even, odd or no-parity generation/detection
- ▶ Complete status reporting capabilities
- ▶ Line break generation and detection
- ▶ Full prioritized interrupt system control
- ▶ No FIFO
- ▶ One additional shift register for transmit and one for receive
- ▶ No Flow Control
- ▶ No FCR register due to unavailability of FIFO
- ▶ MCR and MSR registers only implemented in loopback mode for compatibility with existing drivers and APIs
- ▶ Initialized per default to COM1 3F8h/IRQ4 and COM2 2F8/IRQ3 regardless of presence of an external SIO

The UART clock is generated by the 25MHz LPC clock which results in an accuracy of 0.5% on all UART timings

- Due to the protection circuitry required according COM Express® specification the transfer speed can only be guaranteed for 9600 Baud. Please contact your local sales or support for customized versions without protection circuitry.

- Legacy console redirection via onboard serial ports may be restricted in terms of serial input stream. Since they're only emulating a 16450 device (w/o FIFO) an input stream generated by a program may lose characters. Inputs from a keyboard via terminal program will be safe.

4.9. Fast I2C

The COMe-cBW6 supports a CPLD implemented LPC to I2C bridge using the WISHBONE I2C Master Core provided from opencores.org. The I2C Interface supports transfer rates up to 40kB/s and can be configured in Setup.

Specification for external I2C:

- ▶ Speed up to 400kHz
- ▶ Compatible to Philips I2C bus standard
- ▶ Multi-Master capable
- ▶ Clock stretching support and wait state generation
- ▶ Interrupt or bit-polling driven byte-by-byte data-transfers
- ▶ Arbitration lost interrupt with automatic transfer cancellation
- ▶ Start/Stop signal generation/detection
- ▶ Bus busy detection
- ▶ 7bit and 10bit addressing

4.10. Dual Staged Watchdog Timer

4.10.1. Basics

A watchdog timer (or computer operating properly (COP) timer) is a computer hardware or software timer that triggers a system reset or other corrective action if the main program, due to some fault condition, such as a hang, neglects to regularly service the watchdog (writing a "service pulse" to it, also referred to as "kicking the dog", "petting the dog", "feeding the watchdog" or "triggering the watchdog"). The intention is to bring the system back from the nonresponsive state into normal operation.

The COMe-cBW6 offers a watchdog which works with two stages that can be programmed independently and used one by one.

4.10.2. Time-out events

Reset	A reset will restart the module and starts POST and operating system new.
NMI	A non-maskable interrupt (NMI) is a computer processor interrupt that cannot be ignored by standard interrupt masking techniques in the system. It is typically used to signal attention for non-recoverable hardware errors.
SCI	A system control interrupt (SCI) is a OS-visible interrupt to be handled by the OS using AML code
Delay	Might be necessary when an operating system must be started and the time for the first trigger pulse must extended. (Only available in the first stage)
WDT Signal only	This setting triggers the WDT Pin on baseboard connector (COM Express® Pin B27) only
Cascade:	Does nothing, but enables the 2nd stage after the entered time-out.

4.10.3. WDT Signal

B27 on COM Express® Connector offers a signal that can be asserted when a watchdog timer has not been triggered within time. It can be configured to any of the 2 stages. Deassertion of the signal is automatically done after reset. If deassertion during runtime is necessary please ask your Kontron technical support for further help.

4.11. Speedstep Technology

The Intel® processors offer the Intel® Enhanced SpeedStep™ technology that automatically switches between maximum performance mode and battery-optimized mode, depending on the needs of the application being run. It enables you to adapt high performance computing on your applications. When powered by a battery or running in idle mode, the processor drops to lower frequencies (by changing the CPU ratios) and voltage, conserving battery life while maintaining a high level of performance. The frequency is set back automatically to the high frequency, allowing you to customize performance.

In order to use the Intel® Enhanced SpeedStep™ technology the operating system must support SpeedStep™ technology.

By deactivating the SpeedStep feature in the BIOS, manual control/modification of CPU performance is possible. Setup the CPU Performance State in the BIOS Setup or use 3rd party software to control CPU Performance States.

4.12. C-States

New generation platforms include power saving features like SuperLFM, EIST (P-States) or C-States in O/S idle mode.

Activated C-States are able to dramatically decrease power consumption in idle mode by reducing the Core Voltage or switching of parts of the CPU Core, the Core Clocks or the CPU Cache.

Following C-States are defined:

C-State	Description	Function
C0	Operating	CPU fully turned on
C1	Halt State	Stops CPU main internal clocks via software
C1E	Enhanced Halt	Similar to C1, additionally reduces CPU voltage
C2	Stop Grant	Stops CPU internal and external clocks via hardware
C2E	Extended Stop Grant	Similar to C2, additionally reduces CPU voltage
C3	Deep Sleep	Stops all CPU internal and external clocks
C3E	Extended Stop Grant	Similar to C3, additionally reduces CPU voltage
C4	Deeper Sleep	Reduces CPU voltage
C4E	Enhanced Deeper Sleep	Reduces CPU voltage even more and turns off the memory cache
C6	Deep Power Down	Reduces the CPU internal voltage to any value, including 0V
C7	Deep Power Down	Similar to C6, additionally LLC (LastLevelCache) is switched off

C-States are usually enabled by default for low power consumption, but active C-States may influence performance sensitive applications or real-time systems.

- ▶ Active C6-State may influence data transfer on external Serial Ports
- ▶ Active C7-State may cause lower CPU and Graphics performance

It's recommended to disable C-States / Enhanced C-States in BIOS Setup if any problems occur.

4.13. ACPI Suspend Modes and Resume Events

The COMe-cBW6 supports the S-states S0, S3, S4, S5. S5eco Support: YES

The following events resume the system from S3:

- ▶ USB Keyboard (1)
- ▶ USB Mouse (1)
- ▶ Power Button
- ▶ WakeOnLan (2)

The following events resume the system from S4:

- ▶ Power Button
- ▶ WakeOnLan (2)

The following events resume the system from S5:

- ▶ Power Button
- ▶ WakeOnLan (2)

The following events resume the system from S5Eco:

- ▶ Power Button

(1) OS must support wake up via USB devices and baseboard must power the USB Port with StBy-Voltage
 (2) Depending on the Used Ethernet MAC/Phy WakeOnLan must be enabled in BIOS setup and driver options

5/ Pinout List

5.1. General Signal Description

Type	Description
I/O-3,3	Bi-directional 3,3 V I/O-Signal
I/O-5T	Bi-dir. 3,3V I/O (5V Tolerance)
I/O-5	Bi-directional 5V I/O-Signal
I-3,3	3,3V Input
I/OD	Bi-directional Input/Output Open Drain
I-5T	3,3V Input (5V Tolerance)
OA	Output Analog
OD	Output Open Drain
O-1,8	1,8V Output
O-3,3	3,3V Output
O-5	5V Output
DP-I/O	Differential Pair Input/Output
DP-I	Differential Pair Input
DP-O	Differential Pair Output
PU	Pull-Up Resistor
PD	Pull-Down Resistor
PWR	Power Connection

To protect external power lines of peripheral devices, make sure that: the wires have the right diameter to withstand the maximum available current the enclosure of the peripheral device fulfills the fire-protection requirements of IEC/EN60950

5.2. Connector X1A Row A

Pin	Signal	Description	Type	Termination	Comment
A1	GND	Power Ground	PWR GND	-	-
A2	GBE0_MDI3 -	Ethernet Media Dependent Interface 3 -	DP-I/O	-	-
A3	GBE0_MDI3 +	Ethernet Media Dependent Interface 3 +	DP-I/O	-	-
A4	GBE0_LINK1 00#	Ethernet Speed LED	OD	-	-
A5	GBE0_LINK1 000#	Ethernet Speed LED	OD	-	-

D110	GND	Power Ground	PWR GND	-	-

The termination resistors in these tables are already mounted on the module. Refer to the design guide for information about additional termination resistors.

6/ BIOS Operation

The BIOS (Basic Input and Output System) or UEFI (Unified Extensible Firmware Interface) records hardware parameters of the system in the CMOS on the Computer-on-Module. It's major functions include execution of the POST(Power-On-Self-Test) during system start-up, saving system parameters and loading the operating system. The BIOS includes a BIOS Setup program that allows to modify system configuration settings. The module is equipped with AMI® Aptio, which is located in an onboard SPI serial flash memory.

6.1. Determining the BIOS Version

To determine the BIOS version currently used on the Computer-on-Modules please check System Information Page inside Setup.

6.2. BIOS Update

Kontron provides continuous BIOS updates for Computer-on-Modules. The updates are provided for download on <http://emdcustomersection.kontron.com> with detailed change descriptions within the according Product Change Notification (PCN). Please register for EMD Customer Section to get access to BIOS downloads and PCN service.

Modules with BIOS Region/Setup only inside the flash can be updated with AFU utilities (usually 1-3MB BIOS binary file size) directly. Modules with Intel® Management Engine, Ethernet, Flash Descriptor and other options additionally to the BIOS Region (usually 4-16MB BIOS binary file size) requires a different update process with Intel Flash Utility FPT and a wrapper to backup and restore configurations and the MAC address. Therefore it is strongly recommended to use the batch file inside the BIOS download package available on EMD Customer Section.

- ▶ Boot the module to DOS/EFI Shell with access to the BIOS image and Firmware Update Utility provided on EMD Customer Section
- ▶ Execute Flash.bat in DOS or Flash.nsh in EFI Shell

NOTICE

Any modification of the update process may damage your module!

6.3. POST Codes

Important POST codes during boot-up

Key	Function
AB	BIOS Setup
AD	EFI Shell
AE	Windows

6.4. Setup Guide

The Setup Utility changes system behavior by modifying the Firmware configuration. The setup program uses a number of menus to make changes and turn features on or off.

Functional keystrokes in POST:

Key	Function
DEL	Enter Setup
ESC	Enter Setup
F7	Boot Menu

Functional keystrokes in Setup:

[F1]	Help
[F3]	Load default settings
[F4]	Save and Exit

6.4.1. Menu Bar

The menu bar at the top of the window lists different menus. Use the left/right arrow keys to make a selection.

6.4.2. Legend Bar

Use the keys listed in the legend bar on the bottom to make your selections or exit the current menu. The table below describes the legend keys and their alternates.

Key	Function
← or → Arrow key	Select a menu.
↑ or ↓ Arrow key	Select fields in current menu.
<Home> or <End>	Move cursor to top or bottom of current window.
<PgUp> or <PgDn>	Move cursor to next or previous page.
+/-	Change Option
<Enter>	Execute command or select submenu.
<F1>	General Help window.
<F2>	Previous Values
<F3>	Load the optimized default configuration.
<F4>	Save and exit.
<Esc>	Exit menu.

6.4.3. Selecting an Item

Use the ↑ or ↓ key to move the cursor to the field you want. Then use the + and – keys to select a value for that field. The Save Value commands in the Exit menu save the values displayed in all the menus.

6.4.4. Displaying Submenus

Use the ← or → key to move the cursor to the submenu you want. Then press <Enter>. A pointer (►) marks all submenus.

6.4.5. Item Specific Help Window

The Help window on the right side of each menu displays the Help text for the selected item. It updates as you move the cursor to each field.

6.4.6. General Help Window

Pressing <F1> on a menu brings up the General Help window that describes the legend keys and their alternates. Press <Esc> to exit the General Help window.

6.5. BIOS Setup

6.5.1. Main

Feature	Options	Description
System Language	[English]	Choose the system default language
System Date		Set the Date. Use the Tab to switch between Date elements.
System Time		Set the Date. Use the Tab to switch between Date elements.

6.5.1.1. Platform Information

6.5.2. Advanced

6.5.2.1. Trusted Computing

Feature	Options	Description
Security Device Support	Disable Enable	Enables or Disables BIOS support for security device. O.S. will not show Security Device. TCG EFI protocol and INT1A interface will not be available.

6.5.2.2. ACPI Settings

Feature	Options	Description
Enable ACPI Auto Configuration	Disabled Enabled	Enables or Disables BIOS ACPI Auto Configuration.
Enable Hibernation	Disabled Enabled	Enables or Disables System ability to Hibernate (OS/S4 Sleep State). This option may be not effective with some OS.
ACPI Sleep State	Suspend Disabled S3 (Suspend to RAM)	Select the highest ACPI sleep state the system will enter when the SUSPEND button is pressed.
Lock Legacy Resources	Disabled Enabled	Enables or Disables Lock of Legacy Resources

6.5.2.3. Miscellaneous

Feature	Options	Description
Reset Button Behavior	Chipset Reset Power Cycle	Reset Button Behavior: Chipset Reset, Power Cycle
I2C Speed	200	Select I2C Bus Speed in kHz, min. 1kHz, max. 400kHz. For a default system 200kHz should be an appropriate value.
Onboard I2C Mode	Multimaster Busclear	Multimaster / BusClear
S5 Eco	Disabled Enabled	Reduce supply current in Soft Off (S5) to less than 1mA. If enabled, power button is the only wakeup source in S5! See manual for restrictions in S5 Eco.
PCI Expresscard 0	Port 1, 2, 3, 4 Disabled	Controls PCIe port for ExpressCard support.
PCI Expresscard 1	Port 1, 2, 3, 4 Disabled	Controls PCIe port for ExpressCard support.

6.5.2.4. Watchdog

Feature	Options	Description
Auto-reload	Disabled Enabled	Enable automatic reload of watchdog timers on timeout.
Global Lock	Disabled Enabled	If set to enabled, all Watchdog registers (except WD_KICK) become read only until the board is reset.
Stage 1 Mode	Disabled Reset NMI SMI SCI Delay WDT Signal only	Select Action for this Watchdog stage

6.5.2.5. H/W Monitor

Feature	Options	Description
CPU Temperature	xx°C	Shows the measured temperature of the CPU Diode with onboard HWM.
Module Temperature	xx°C	Shows the internal hardware monitor temperature.
CPU FAN	xxxx rpm	Shows the fan speed of onboard FAN connector.
Fan Control	Disabled Manual Auto	Set fan control mode. 'Disable' will totally stop the fan.
Fan Pulse	2	Number of Pulses the fan produces during one revolution. Range: 1-4
Fan Trip Point	50	Temperature where fan accelerates. Range: 20 – 80 C
Trip Point Speed	50	Fan speed at trip point in %. Minimum value is 30. Fan always runs at 100% at TJmax – 10 C
Reference Temperature	CPU Temperature Module Temperature	Determines the temperature source which is used for automatic fan control
External FAN	xxxx rpm	Shows the fan speed of external COMe FAN.
FAN Control	Disabled Manual Auto	Set fan control mode. 'Disable' will totally stop the fan.

Fan Pulse	2	Number of pulses the fan produces during one revolution. Range 1-4
Fan Trip Point	50	Temperature where fan accelerates. Range 20 – 80 C
Trip Point Speed	50	Fan speed at trip point in %. Minimum value is 30. Fan always runs at 100% at TJmax – 10 C.
Reference Temperature	PCH Temperature Module Temperature CPU Temperature	Determines the temperature source which is used for automatic fan control.
5.0V Standby	x.xx V	Shows the 5V Standby Voltage input.
Batt volt at COMe pin	x.xx V	Shows the RTC Battery Voltage input measured at COMe connector.
Widerange Vcc	x.xx V	Shows the Module Main Input Voltage.
External FAN	xxxx rpm	Shows the fan speed of external COMe FAN.

6.5.2.6. Serial Port Console Redirection

Feature	Options	Description
COM0 Console Redirection	Disabled Enabled	Console Redirection Enable or Disable.
COM1 Console Redirection	Disabled Enabled	Console Redirection Enable or Disable.
COM2 Console Redirection	Port Is Disabled	
COM3 Console Redirection	Port Is Disabled	
Serial Port for Out-of-Band Management/Windows Emergency Management Services (EMS) Console Redirection	Disabled Enabled	Console Redirection Enable or Disable.

COM0 and COM1 are always available.
COM2 and COM3 can only be selected if an optional Winbond SuperIO is available in the system.

6.5.2.7. Legacy Console Redirection Settings

Feature	Options	Description
Legacy Serial Redirection Port	COM0 COM1 COM2 (Disabled) COM3 (Disabled)	Select a COM port to display redirection of Legacy OS and Legacy OPRM Messages

6.5.2.8. Con sole Redirection Settings (Disabled)

Feature	Options	Description
Terminal Type	VT100 VT100+ VT-UTF8 ANSI	Emulation: ANSI: Extended ASCII char set. VT100: ASCII char set. VT100+: Extends VT100 to support color, function keys, etc. VT-UTF8: Uses UTF8 encoding to map Unicode chars onto 1 or more bytes.
Bits per second	9600 19200 38400 57600 115200	Selects serial port transmission speed. The speed must be matched on the other side. Long or noisy lines may require lower speeds.
Data Bits	7 8	Data Bits
Parity	None Even Odd Mark Space	A parity bit can be sent with the data bits to detect some transmission errors. Even: parity bit is 0 if the num of 1's in the data bits is even. Odd: parity bit is 0 if num of 1's in the data bits is odd. Mark: parity bit is always 1. Space: Parity bit is always 0. Mark and Space Parity do not allow for error detection.
Stop Bits	1 2	Stop bits indicate the end of a serial data packet. (A.start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.

Flow Control	None Hardware RTS/CTS	Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to restart the flow. Hardware flow control uses two wires to send start/stop signals.
VT-UTF8 Combo Key Sup	Disabled Enabled	Enable VT-UTF8 Combination Key Support for ANSI/VT100 terminals
Recorder Mode	Disabled Enabled	With this mode enabled only text will be sent. This is to capture Terminal data.
Resolution 100~31	Disabled Enabled	Enables or disables extended terminal resolution
Legacy OS Redirection Resolution	80x24 80x25	On Legacy OS, the Number of Rows and Columns supported redirection
Putty KeyPad	VT100 LINUX XTERMR6 SCO ESCN VT400	Select FunctionKey and KeyPad on Putty.
Redirection After BIO	Always Enable BootLoader	The Settings specify if Bootloader is selected then legacy console redirection is disabled before booting to legacy OS. Default value is Always Enable which means Legacy console Redirection is enabled for Legacy OS.

6.5.2.9. CPU Configuration

Feature	Options	Description
Socket 0 CPU Configuration	-	Socket specific CPU Information
Limit CPUID Maximum	Disabled Enabled	Disabled for Windows XP
Bi-directional PROCHOT	Disabled Enabled	When a processor thermal sensor trips (either core), the PROCHOT# will be driven. If bi-direction is enabled, external agents can drive PROCHOT# to throttle the processor.
Intel Virtualization Technology	Disabled Enabled	When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.
Power Technology	Disable Energy Efficient Custom	Enable the power management features.

6.5.2.10. CPU Thermal Configuration

Feature	Options	Description
DTS	Disabled Enabled	Enabled/Disable Digital Thermal Sensor.

6.5.2.11. PPM Configuration

Feature	Options	Description
EIST	Disabled Enabled	Enable/Disable Intel SpeedStep
CPU C state Report	Disabled Enabled	Enable/Disable CPU C state report to OS
Max CPU C-state	C7 C6 C1	This option controls Max C state that the processor will support
S0ix	Disabled Enabled	Enable/Disable CPU S0ix state

6.5.2.12. Thermal Configuration

Feature	Options	Description
Critical Trip Point	95	This value controls the temperature of the ACPI critical Trip Point – the point in which the OS will shut the system off. Note: 100C is the Plan of Record (PDR) for all Intel mobile processors.
Passive Trip Point	85	This value controls the temperature of the ACPI critical Trip Point – the point in which the OS will begin throttling the processor.
DPTF	Disabled Enabled	Enable/Disable DPTF

6.5.2.13. SATA Configuration

Feature	Options	Description
SATA Controller	Disabled Enabled	Enable/Disable SATA Device
SATA Mode Selection	AHCI	Determine SATA controller operation.
SATA Interface Speed	Gen1 Gen2 Gen3	Select SATA Interface Speed, CHV A1 always with Gen1 Speed.
SATA Test Mode	Disabled Enabled	Test Mode enable / disable.
Aggressive LPM Support	Disabled Enabled	Enable PCH to aggressively enter link power state.
Software Feature Mask Configuration	-	RAID OPOM/RST driver will refer to the SWFM configuration to enable/disable the storage features.
Port 0	Enabled Disabled	Enable / Disable SATA Port.
Spin Up Device	Enabled Disabled	If enable for any of ports Staggered Spin Up will be performed and only the drives which have this option enabled will spin up at boot. Otherwise all drives spin up at boot.

Device Sleep Support	Enabled Disabled	Enable/Disable Device Sleep Support on that port.
Port 1	Enabled Disabled	Enable / Diabie SATA Port.
Spin Up Device	Enabled Disabled	If enable for any of ports Staggered Spin Up will be performed and only the drives which have this option enabled will spin up at boot. Otherwise all drives spin up at boot.
Device Sleep Support	Enabled Disabled	Enable/Disable Device Sleep Support on that port.

6.5.2.14. Software Feature Mask Configuration

Feature	Options	Description
HDD Unlock	Enabled Disabled	If enable, indicates that the HDD password unlock in the OS is enable.
LED Locate	Enabled Disabled	If enabled indicates that the LEG/SGPIO hardware is attached and ping to locate if feature is enabled on the OS.

6.5.2.15. Chipset Miscellaneous Configuration

Feature	Options	Description
SMBus Support	Enabled Disabled	Enable/Disable SMBus Support
Serial IRQ	Enabled Disabled	Enable/Disable SIRQ logic
Serial IRQ Mode	Quiet Continuous	Configure serial IRQ mode.
OS Mode Mode	Default Legacy System Yocto Linux	Allows to preset chipset devices for the needs of certain Operating Systems
USB3 Clock Spread Spectrum	Enabled Disabled	Enable USB3 clock Spread Spectrum feature.
Display Clock Spread Spectrum	Enabled Disabled	Enable Display clock spread spectrum feature.
SATA Clock Spread Spectrum	Enabled Disabled	Enable SATA clock spread spectrum feature.
After Power fail	Power Off Power On	Select AC power state when power is re-applied after a power failure.

6.5.2.16. LPSS & SCC Configuration

Feature	Options	Description
SCC eMMC Support	ACPI mode PCI mode Disabled	Enable/Disable eMMC Support (D16:F0)
eMMC Driver operating Mode	Auto Detect Basic Frequency Up to 26MHz Up to 52MHz	Select the operating frequency in eMMC driver
eMMC RX DLL Tuning Support	Enabled, Disabled	Enable/Disable eMMC RX DLL Tuning Support
eMMC TX DLL Tuning Support	Enabled Disabled	Enable/Disable eMMC TX DLL Tuning Support
eMMC Secure Erase	Enabled Disabled	Enable/Disable eMMC Secure Erase. When enabled, all the data on eMMC will be erased.
SCC SD Card Support	ACPI Mode PCI Mode Disabled	Enable/Disable SD Card Support (D18:F0)
SD Card 1.8v Switching Delay	0	Set SD Card 1.8v Switching Delay From 0 to 999 ms
SD Card 3.3v Switching Delay	250	Set SD Card 3.3v Discharge Delay From 0 to 999 ms

6.5.2.17. System Component

Feature	Options	Description
PMIC ACPI OBJECT	Enabled Disabled	Enable/Disable PMIC ACPI Device (D16:F0)
PNP Setting	Disabled Auto AX STEEPING BX STEEPING	Select PNP Setting mode. Disable, Performance, Power or Power&Performance mode

6.5.2.18. AMI Graphic Output Protocol Policy

Feature	Options	Description
Output Select	DP1	Output Interface

6.5.2.19. SIO Configuration

Feature	Options	Description
[*Active*] Serial Port 0	DP1	View and set basic

6.5.2.20. Serial Port 0/1 Configuration

Feature	Options	Description
Use This Device	Disabled Enabled	Enable or disable this Logical Device.
Possible:	Use Automatic Settings IO=3F8h; IRQ=4; IO=3F8h; IRQ=3,4,5,7,9,10,11,12; IO=2F8h; IRQ=3,4,5,7,9,10,11,12; IO=3E8h; IRQ=3,4,5,7,9,10,11,12; IO=2E8h; IRQ=3,4,5,7,9,10,11,12;	Allows user to change device's resource settings. New settings will be reflected on this setup page after system restarts.

6.5.2.21. PCI Subsystem Settings

Feature	Options	Description
PCI Latency Timer	32 PCI Bus Clocks 64 PCI Bus Clocks 96 PCI Bus Clocks 128 PCI Bus Clocks 160 PCI Bus Clocks 192 PCI Bus Clocks 224 PCI Bus Clocks 248 PCI Bus Clocks	Value to be programmed into PCI Latency timer Register.
PCI-X Latency Timer	32 PCI Bus Clocks 64 PCI Bus Clocks 96 PCI Bus Clocks 128 PCI Bus Clocks 160 PCI Bus Clocks 192 PCI Bus Clocks 224 PCI Bus Clocks 248 PCI Bus Clocks	Value to be programmed into PCI Latency timer Register.
VGA Palette Snoop	Disabled Enabled	Enables or Disables VGA Palette Registers Snooping.
PERR# Generation	Disabled Enabled	Enables or Disables PCI Device to Generate PERR#.

SERR# Generation	Disabled Enabled	Enables or Disables PCI Device to Generate SERR#.
Above 4G Decoding	Disabled Enabled	Enables or Disables 64bit capable Devices to be Decoded in Above 4G Address Space (Only if System Supports 64 bit PCI decoding).
Don't Reset VC-TC Mapping	Disabled Enabled	If system has Virtual Channels, Software can reset traffic Class mapping through Virtual Channels, to its default state. Setting this option to Enabled will not modify VC Resources.

6.5.2.22. Network Stack Configuration

Feature	Options	Description
Network Stack	Disabled Enabled	Enable/Disable UEFI network Stack

6.5.2.23. CSM Configuration

Feature	Options	Description
CSM Support	Disabled Enabled	Enable/Disable CSM Support.

6.5.2.24. NVMe Configuration

Feature	Options	Description
No NVME Device Found	-	-

6.5.2.25. USB Configuration

Feature	Options	Description
Legacy USB Support	Enabled Disabled Auto	Enables Legacy USB support. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications.
XHCI Hand-off	Enabled Disabled	This is a workaround for OSEs without XHCI ownership change should be claimed by XHCI driver.
USB Mass Storage Driver Support	Enabled Disabled	Enable/Disable USB Mass Storage Driver Support.
USB transfer time-out	1 sec 5 sec 10 sec 20 sec	The time-out value for Control, Bulk, and Interrupt transfers.
Device reset time-out	10 sec 20 sec 30 sec 40 sec	USB mass storage device Start Unit command time-out.
Device power-up delay	Auto Manual	Maximum time the device will take before it properly reports itself to the Host Controller. 'Auto' uses default value: for a root port it is 100 ms, for a hub port the delay is taken from hub descriptor.

6.5.2.26. Platform Trust Technology

Feature	Options	Description
fTPM	Enabled Disabled	Enable/disable fTPM

6.5.2.27. Security Configuration

Feature	Options	Description
TXE HMRFP0	Enabled Disabled	Host ME Region flash Protection Override
TXE Firmware update	Enabled Disabled	
TXE EOP Message	Enabled Disabled	Send EOP Message before Enter OS

6.5.2.28. IntelRMT Configuration

Feature	Options	Description
Intel RMT Support	Disabled Enabled	Intel RMT (Ready Mode Technology) SSDT table will be loaded if enabled.

6.5.3. Chipset

6.5.3.1. North Bridge

Feature	Options	Description
Max TOLUD	2 GB 2.25 GB 2.5 GB 2.75 GB 3 GB	Maximum Value of TOLUD.

6.5.3.2. Intel IGD Configuration

Feature	Options	Description
GOP Driver	Enabled Disabled	Enable GOP Driver will unload VBIOS; Disable it will load VBIOS
Integrated Graphics Device	Enabled Disabled	Enable: Enable Integrated Graphics Device (IGD) when selected as the Primary Video Adaptor. Disable: Always disable IGD
IGD Turbo	Auto Enabled Disabled	Select the IGD Turbo feature, if Auto selected, IGD Turbo will only be enabled when SOC steeping is B0 or above.
Primary Display	Auto IGD PCIe	Select which of IGD/PCI graphics device should be Primary Display.
GFX Boost	Enabled Disabled	Enable/Disable GFX Boost
PAVC	Enabled Disabled	Enable/Disable Protected Audio Video Control
PR3 (For Win 10 only)	Enabled Disabled	Enable/Disable PR3 (For Win 10 only)

DVMT Pre-Allocated	32M 64M 96M 128M 160M 192M 224M 256M 288M 320M 352M 384M 416M 448M 480M 512M	Select DVMT 5.0 Pre-Allocated (Fixed) Graphics Memory size used by the Internal Graphics Device.
DVMT Total Gfx Mem	128MB 256MB Max	Select DVMT 5.0 Total Graphic Memory size used by the Internal graphics Device.
Aperture Size	128MB 256MB Max	Select the Aperture Size
GTT Size	2MB 4MB 8MB	Select the GTT Size
IGD Thermal	Disabled Enabled	Enable/Disable IGD Thermal
Spread Spectrum clock	Disabled Enabled	Enable/Disable Spread Spectrum clock
WOPCMSZ	1MB 2MB 4MB 8MB	Select a size for WOPCMSZ.
ISP Enable/Disable	Disabled Enabled	Enable/Disable ISP PCI Device Selection
PUNIT Power Configuration	Disabled Enabled	Enable or Disable Punit Power configuration.
Svid Configuration	Platform Defaults Svid Config 0 Svid Config 1 Svid Config 3 Svid Config 4 BSW I2C PMIC Config	Choose The Right SVID Config

6.5.3.3. GOP Related LCD Control

Feature	Options	Description
Force Lid Status	On Off	For test: force to set lid status as on or off.
BIA	Auto Level1 Level2 Level3 Level4 Level5 Disabled	Auto: GMCH Use VBIOS Default; Level n: Enabled with Selected Aggressiveness Level
ALS Support	Disabled, Enabled	Valid only for ACPI
IGD Flat Panel	Auto 640*480 800*600 1024*768 1280*1024 1366*768 1680*1050 1600*1200 1280*800	IGD Flat Panel Options

Panel Scaling	Auto Centering Stretching	Select the LCD panel scaling option used by internal Graphics Device.
---------------	--	---

6.5.3.4. LCD Control

Feature	Options	Description
IGD - Boot Type	Auto EFP LFP EFP2	Select the Video Device activated during POST. This has no effect if external graphics are present.
Backlight Control	None/External PWM PWM Inverted I2C I2C Inverted	Backlight Control Setting
Intel Smooth Brightness Control	Disabled Enabled	If enabled, PWM values will be overridden by OS Power Options.
PWM Frequency	200 Hz 400 Hz 1 kHz 2 kHz 4 kHz 8 kHz 20 kHz 40 kHz	Set LCD backlight PWM frequency.
Backlight value	128	Set LCD backlight brightness (0-255).

LVDS Clock Center Spreading	No Spreading 0.5% 1.0% 1.5% 2.0% 2.5%	Select LVDS clock frequency center spreading depth.
EFP1 Type	DisplayPort Only DP with HDMI/DVI HDMI/DVI	Integrated HDMI/DisplayPort Configuration with External Connectors.
EFP2 Type	DisplayPort Only DP with HDMI/DVI HDMI/DVI	Integrated HDMI/DisplayPort Configuration with External Connectors.

6.5.3.5. Graphics Power Management Control

Feature	Options	Description
RC6(Render Standby)	Enabled Disabled	Check to enable render standby support.
Power Meter Lock	Enabled Disabled	Enable/Disable Power Meter Lock.

6.5.3.6. South Bridge

6.5.3.7. Security Configuration

Feature	Options	Description
RTC Lock	Enabled Disabled	Enable or disable bytes 38h-3Fh in the upper and lower 128-byte bank of RTC RAM lockdown.
BIOS Lock	Enabled Disabled	Enable/Disable the BIOS Lock Enable feature.
Global SMI Lock	Enabled Disabled	Enable or Disable SMI lock.

6.5.3.8. HD Audio Configuration

Feature	Options	Description
LPE Audio Support	Disabled PCI mode ACPI mode	Enable/Disable Low Power Engine Audio (LPE Audio) Support.
HD Audio Controller	Enabled Disabled	Control Detection of the HD audio device (HDA). Disabled = HD audio will be unconditionally disabled. Enabled = HD audio will be unconditionally enabled.
HD Audio VCI Enable	Enabled Disabled	Enable/Disable Virtual Channel 1 of HD Audio Controller.
HD Audio Docking Support Enable	Enabled Disabled	Enable/Disable docking support of HD Audio Controller.
HD Audio Docking PME Enable	Enabled Disabled	Enable/Disable power management capabilities of HD Audio Controller.
HD Audio HDMI Codec	Enabled Disabled	Enable/Disable internal HDMI codec for HD Audio.
HD Audio HDMI Codec Port B	Enabled Disabled	Enable/Disable internal HDMI Port for HD Audio.
HD Audio HDMI Codec Port C	Enabled Disabled	Enable/Disable internal HDMI Port for HD Audio.
HD Audio HDMI Codec Port D	Enabled Disabled	Enable/Disable internal HDMI Port for HD Audio.

6.5.3.9. USB Configuration

Feature	Options	Description
xHCI Mode	Enabled	Enable/Disable Low Power Engine Audio (LPE Audio) Support.
SSIC Support Enable	Enabled Disabled	Enable/Disable SuperSpeed Inter-Chip (SSIC) Support.
SSIC Init Sequence	SSIC Initialization Sequence 1 SSIC Initialization Sequence 2	SSIC Initialization Sequence 1 – Windows, SSIC Initialization Sequence 2 – Android.
SSIC Port 1	Enabled Disabled	Enable/Disable SuperSpeed Inter-Chip (SSIC) Port 1.
SSIC Port 2	Enabled, Disabled	Enable/Disable SuperSpeed Inter-Chip (SSIC) Port 2.
HSIC Port 1	Enabled Disabled	Enable/Disable HighSpeed Inter-Chip (HSIC) Port 1.
HSIC Port 2	Enabled Disabled	Enable/Disable HighSpeed Inter-Chip (HSIC) Port 2.
USB2 PHY Power Gating	Auto Enabled Disabled	Enable/Disable power management capabilities of HD Audio Controller.
USB3 PHY Power Gating	Auto Enabled Disabled	Enable/Disable internal HDMI codec for HD Audio.
USB OTG Support	PCI mode Disabled	Enable/Disable internal HDMI Port for HD Audio.

6.5.3.10. PCI Express Configuration

Feature	Options	Description
Native PCIE Enable	Enabled Disabled	PCI Express native Support Enable/Disable. This feature is only available in Vista.

6.5.3.11. PCI Express Root Port 1 (2, 3, 4)

Feature	Options	Description
PCI Express Root Port 1	Enabled Disabled	Control the PCI Express Root Port.
ASPM	Auto Disabled L0s L1 L0sL1	PCI Express Active State Power management settings.
URR	Enabled Disabled	PCI Express Unsupported Request Reporting Enable/Disable.
FER	Enabled Disabled	PCI Express Device Fatal Error Reporting Enable/Disable.
NFER	Enabled Disabled	PCI Express Device Non-Fatal Error Reporting Enable/Disable.
CER	Enabled Disabled	PCI Express Device Correctable Error Reporting Enable/Disable.
SEFE	Enabled Disabled	Root PCI Express System Error on Fatal Error Enable/Disable.
SENFE	Enabled Disabled	Enable or disable Root PCI Express System Error on Non-Fatal Error.

SECE	Enabled Disabled	Root PCI Express System Error on Correctable Error Enable/Disable.
PME SCI	Enabled Disabled	PCI Express PME SCI Enable/Disable.
Ext Sync	Enabled Disabled	Enable Express Ext Sync Enable/Disable.
PCIe Speed	Auto Gen2 Gen1	Configure PCIe Speed. CHV A1 always with Gen1 Speed.
Detect Non-Compliance Device	Enabled Disabled	Detect Non-Compliance PCI Express Device. If enable, it will take more time at POST time.
L1 Substates	Disabled L1.1 L1.2 L1.1 & L1.2	PCI Express L1 Substates settings.
Non-Common Clock With SSC Enabled	Enabled Disabled	Assume the root port is operating at non-common clock with SSC enabled.
Transmitter Half Swing	Enabled Disabled	Transmitter Half Swing Enable/Disable.
Tx Eq Deemphasis Selection	3.5dB 6dB	Select the level of de-emphasis for Upstream component.

We strongly recommend not to enable ASPM. Enabling ASPM may cause problems recognizing some PCI devices.

6.5.3.12. PCI Express S0ix Settings

Feature	Options	Description
D0 S0ix Policy	PCIe RC shall be in D3 S0i1 is the deepest S0ix state PCIe RC is in D0 when entering S0ix Reserved	Control the PCI Express Root Port.
Evaluate CLKREQ State	Enabled Disabled	Enable/disable evaluation of CLKREQ state.
CLKREQ# Enable	CLKREQ# [0] CLKREQ# [1] CLKREQ# [2] CLKREQ# [3]	CLKREQ# [x] shall be evaluate during PCIe in D0 S0ix entry and criteria checking
S0ix LTR Threshold (Latency Scale)	1ns 32ns 1024ns 32,768ns 1,048,576ns 33,554,321ns	PCIe S0ix LTR Threshold: Latency Scale
PCIe LTR Threshold (Latency Value)	150	PCIe S0ix LTR Threshold: Latency Value. This value is multiplied by latency Scale

6.5.4. Security

Feature	Options	Description
Administrator Password	-	Set Administrator Password
User Password	-	Set User Password
HDD Security Configuration	See next screen!	HDD Security Configuration for selected drive.

6.5.5. HDD Security Configuration

6.5.6. Boot

Feature	Options	Description
Setup Prompt Timeout	6	Number of seconds to wait for setup activation key 65535(0xFFFF) means indefinite waiting
Bootup NumLock State	On Off	Select the keyboard NumLock state
Quiet boot	Disabled Enabled	Enables or disables Quiet boot option
Boot Option #1	Windows Boot manager (P0: WDC WD1600AAJS-00PSA0) UEFI: built-in EFI Shell Disabled	Sets the system boot order
Boot Option #2	Windows Boot manager (P0: WDC WD1600AAJS-00PSA0) UEFI: built-in EFI Shell Disabled	Sets the system boot order
Fast boot	Disabled Enabled	Enables or disables boot with initialization of a minimal set of devices required to launch active boot option. Has no effect for BBS boot options.
New HDD Priority	Low High	Boot priority for new connected HDD.

Bootmenu Type	Device Based Port Based	Enables Device or Port Based Bootmenu
New Boot Option Policy	Default Place First Place Last	Controls the placement of newly detected UEFI boot options

6.5.7. Save & Exit

Feature	Options	Description
Save Changes and Exit	-	Exit system setup after saving the changes.
Discard Changes and Exit	-	Exit system setup without saving any changes.
Save Changes and Reset	-	Reset system after saving the changes.
Discard Changes and Reset	-	Reset system without saving any changes.
Save Changes	-	Save Changes done so far to any of the setup options.
Discard Changes	-	Discard Changes done so far to any of the setup options.
Restore Defaults	-	Restore/Load Default values for all the setup options.
Save as User Defaults	-	Save the changes done so far as User Defaults.
Restore User Defaults	-	Restore the User Defaults to all the setup options.
Boot Override	List of all boot options	Boot directly from selected device

About Kontron

Kontron, a global leader in embedded computing technology and trusted advisor in IoT, works closely with its customers, allowing them to focus on their core competencies by offering a complete and integrated portfolio of hardware, software and services designed to help them make the most of their applications.

With a significant percentage of employees in research and development, Kontron creates many of the standards that drive the world's embedded computing platforms; bringing to life numerous technologies and applications that touch millions of lives. The result is an accelerated time-to-market, reduced total-cost-of-ownership, product longevity and the best possible overall application with leading-edge, highest reliability embedded technology

Kontron is a listed company. Its shares are traded in the Prime Standard segment of the Frankfurt Stock Exchange and on other exchanges under the symbol "KBC". For more information, please visit: <http://www.kontron.com/>
